LEARN TODAY. AMAZE TOMORROW.

Pre-Scheduled Meetings

The centrepiece of Innovation Africa 2019 are the pre-scheduled meetings for industry partners to book, in advance, their preferred ministries, countries and organisations to interact with customers and maximise return on time spent participating at the summit.

Within the main conference arena, dedicated meeting tables will be set up for ministries of ICT, education, higher education, science & technology and universities from sub-Saharan African countries. Industry partners obtain access to our online scheduling system allowing them to choose meetings, create their own agenda and specifically target key clients and partners prior to the start of the summit. It is a format that ensures a successful forum for all participants and above all it is what makes Innovation Africa 2019 stand alone as a unique working event for getting business done.

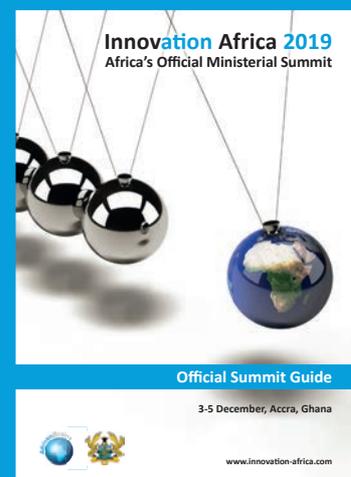

The meetings represent a great opportunity for officials to gain expertise from the market, hear of the latest product and technological developments and, under one roof, engage with private sector operators who can fulfil the demands for education and ICT innovation in their country. Under one roof over

two days it allows governments to meet leading industry partners on a one-to-one basis and find out the latest market developments and equally gives industry the opportunity to meet so many officials at one single event.

Welcome to Innovation Africa 2019

The Government of Ghana and AfricanBrains are delighted to welcome all delegates to Innovation Africa 2019. The event is for government officials, civil society and industry leaders to meet under one roof and engage in opportunities to advance greater public private partnerships in education and ICT innovation.

We would like to offer our warmest gratitude and appreciation to all attending government officials, industry partners, university officers and delegates. This summit is a unique meetings-based event, allowing for valuable one-to-one meetings during the afternoons of 4th & 5th December between government, industry, universities and civil society stakeholders. We are especially grateful to the Government of Ghana, the Steering Committee and all Ghanaian stakeholders who have made this possible under the joint patronage of Hon Matthew Opoku Prempeh and Hon Ursula Owusu-Ekuful, Ministers of Education and Communications respectively.

A special thank you is reserved to all our event partners and delegates without whom such considerable organisation would not be possible. We appreciate the support of everyone who has travelled far and wide to be in Ghana this year and the time you have dedicated to be part of this important meetings based summit.

On the evening of 3rd December there will be a reception for all delegates at the poolside of the Movenpick Hotel. For the 4th & 5th December, these two days are structured around our innovative program of panel discussions in the mornings and then converting to pre-scheduled one-to-one meetings during both afternoons. This includes the Ms. Geek Ghana final during the morning of 5th December. The evening of 4th December sees the gala dinner hosted by the Government of Ghana at the Labadi Beach Hotel. Transport has been arranged and we trust all delegates will join this important social occasion. Please see the separate forum agenda for event timings.

There will be over 50 meeting areas for the event. After lunch on both days, the pre-scheduled meetings will start. Government ministries, universities and other key agencies will be hosting these meeting tables and we kindly ask that all officials and delegates start the meetings promptly after lunch each day. The floor plan of tables is available at the entrance to the conference room. Prior to the start

of the summit, partners and delegates will have utilised our online scheduling system to arrange their afternoon meetings. There will also be the opportunity to arrange ad hoc meetings through the course of the event.

We trust this summit can play its own small part in bringing together key decision-makers from both government and industry to build their own relationships and strengthen public-private partnerships. We are grateful for your support and participation and we trust your time at the event is enjoyable, and productive.

Warmest regards,

John Glassey
CEO, AfricanBrains

Where education and work meet: The changing challenges for governments

Rt. Hon Charles Clarke

Our children are growing up in a world of increasingly rapid change. The African Union has excitingly recognised this by setting the year 2063 as the deadline for turning Africa into a “transformed continent”.

Education systems in Africa have a vital role to play in boosting young people’s confidence that they can make a difference to the lives of their communities, countries and continent.

New technologies, in the so-called ‘fourth industrial revolution’, mean that there is a new world economy with new products, new skills and new work locations.

The advance of artificial intelligence (AI) means that the nature of the work that is done by people will change out of all recognition and poses the real threat that long-established jobs will now be done by machines rather than people.

These changes, and others, mean that our social relationships with others are changing too.

This future holds so many possibilities – the younger generation will be able to work in diverse, flexible and innovative ways, and we need to ensure they are educated in ways that make them as creative, resilient, resourceful and innovative as possible, and so able to take advantage of the opportunities that they will find.

All of these changes are taking place in Africa at a faster pace than ever before and are already finding creative responses across the continent. They have enormous implications for the future of education.

This is a challenge for ministers of education but it also requires ministries of labour, technology, agriculture, fisheries, tourism and heads of national industries to do their best to identify the skills that they are likely to need in the future and to work together

with ministries of education to translate those into strong educational outcomes.

Creating education for the future

Education is the best means by which our new generations can equip themselves to handle these enormous challenges and become the beneficiaries of change, rather than its victims.

That defines the task facing all educators, and the governments that support them. It is to create a forward-looking education system which can prepare children for this future, rather than simply looking backwards to achievements of the past.

The challenge extends to the curriculum from which our children learn, the assessment systems which accredit their achievements, the quality of the teaching and learning materials which help them and, most important of all, the quality of their teachers.

In each of these areas the education system has to develop in relation to the modern world of work and the wider society so that they are prepared for the future and not rooted in the past.

Curriculum and assessment

Many core essentials, including reading and writing, mathematics and basic science, must rightly remain at the heart of the curriculum. Students’ personal social qualities need to be developed. And creativity and critical thinking are even more important since, as Joseph Aoun’s book *Robot-Proof* demonstrates, in the advancing AI world these are the key means by which human beings will maintain their competitive advantage over machines.

And part of the basic curriculum has to be awareness of the wider world. School needs to introduce understanding of the

communities of work and wider society. It cannot simply be a protective shield, keeping out reality.

So governments need to ensure that the creation and development of the school curriculum involves that wider community of work and society which provide the context of children's future life. This is difficult for governments as both student learners and their teachers need stable curricula. But that tricky tightrope has to be walked successfully.

The same is true for the assessment systems which should enable children to learn by helping them properly to understand their strengths and weaknesses. And at the same time they have to provide the accreditation which permits them to move successfully to the next stage of their education, or to work, or both.

Teachers and their teaching and learning materials

Of course teachers are the professionals who are absolutely central to making the process of education work for children. They should be well supported by good training and by their teaching and learning materials.

They themselves need to have forward-looking and open-minded attitudes and characters which embody a future-focused mentality. They need to lead in this direction, and headteachers more than anyone.

These strengths need to be inculcated through both their initial training and continuous professional development throughout their teaching life, including experience of the modern world of work and the wider society.

Teachers need proper support, both in terms of their own status and pay, and with high-quality teaching and learning materials.

Education is the best means by which our new generations can equip themselves to become the beneficiaries of change, rather than its victims.

A future-focused education system

All elements of the modern and forward-looking education system described here require strong and positive engagement with modern working communities. But a particularly important component is a strong offer to students of high-quality Vocational and Technical Education, sometimes specific to particular fields of work and sometimes more general in character. This aspect of education requires particularly close engagement with the demands of the local labour market.

The best service which ministers of education can offer to the children and young people of their countries is to use the levers at their disposal – curriculum, assessment, teachers and teaching and learning materials – to ensure that the education system is future-focused. This will enable these young people to overcome the challenges of change which can sometimes seem overwhelming.

CAMBRIDGE

**TRANSFORMING
SOCIETIES THROUGH
EDUCATION**

A partnership with Cambridge provides access to specialist knowledge, experience and support in the development and delivery of education reform.

- We work with governments to make real change in global education systems.
- Our work includes designing and implementing programmes in curriculum, assessment, publishing, teacher training; raising standards of English language learning and teaching.
- We create coherent solutions that are scalable, sustainable and have a record of success.

South African entrepreneur use robotics to transform education

A young South African entrepreneur aims to use a robot to teach children how to build new robots. RD9 Solutions is a start-up company created by Tyrone van Balla. van Balla and his business partner Ridhaa Benefeld aim to build robots and use them as educational tools. Together, they have designed a robot and a curriculum that offers a course in programming and robotics.

"We've always been inspired by technology, and we're dedicated to making it as accessible to others as possible, so that they too may be inspired," van Balla said. RD9 Solutions is a tech innovation company that strives to find answers to everyday challenges by developing creative and cost-

effective solutions. The start-up company currently operates in the ed-tech space and offers an accessible and innovative platform through which topics as electronics, programming and robotics can be taught.

This platform aims to fill the skill gap among South Africa's youth as in today's current society phrases and words such as 'programming,' 'big data' and 'data science' are fast becoming vital skills that are needed in preparation for emerging fields. "We make technology more accessible to the masses. We allow kids to be exposed to and learn about programming from a very young age. We allow the innovators and game-changers of tomorrow to get a head start on their careers today," van Balla comments.

van Balla grew up in Grassy Park, Cape Town, where he developed an interest in computers at a young age. "I remember that while we may not have had much while I was growing up, I was also exposed to many new things and opportunities. While I didn't own one, I had frequent access to a computer from about five years old. This opportunity sparked my love and interest [for] technology and influenced my career choice," van Balla says about his early years.

van Balla joined the Alan Gray Orbis Foundation Fellowship in 2011, which helped support his career. The Fellowship Programme is one of three programmes that the Foundation offers in order to help young entrepreneurs jump-start their careers. The Foundation offers Fellowship recipients funding for their university studies, as well as access to development and support to help the recipients develop an entrepreneurial mindset. These programmes take place throughout the entirety of the academic year in tandem with the Candidate Fellow's university studies.

"At the time I applied for the Fellowship, I was mainly focused on finding a bursary. I knew my parents couldn't afford my university fees, and I had set my mind on studying engineering. I was most intrigued by the idea of being among like-minded individuals with a similar drive for excellence. The Fellowship fosters a solid foundation for your personal growth, while university fosters your academic growth," van Balla says.

van Balla believes that the Fellowship is more than a funding scholarship. He sees it as an opportunity for entrepreneurial and personal growth. "I am proud of the fact that I made the most of the opportunities I was presented with in life. In doing so, I am now in a position to motivate, empower and inspire others to achieve their goals, despite their circumstances or background," van Balla says.

RD9 Solutions has conducted a few pilot programmes with different schools and institutions. The company is currently working to build a platform that will encourage and foster self-learning and self-exploration of the different terms and concepts. "I am passionate about teaching and empowering others. In five years, I see us expanding our offering not only across South Africa, but also throughout Africa. I see us making a lasting contribution to [the] lives of the African youth through our work," van Balla comments.

Edited by Kojo Essah

Haier Interactive Classroom Solution

Haier Interactive Classroom Solution does not only break the traditional one-way teaching, but also achieves interaction between teachers and students, through the functions including screen sharing, video streaming, group collaboration, file sharing and digital resting, management and control, etc.

1. Teaching Facilities – Smart Devices

- Digital courseware illustrated on Smart Devices, effectively teaching & learning complex knowledge
- Computer skills enhanced in daily class

3. Assessment – In-class Paperless Quiz

- Disseminate quiz & answer sheet to all/ indicated students instantly
- Students directly answer & submit on devices
- System automatically grading, with overall/ comparison analysis

2. Teaching Methods – Student-centered

- Interactive & engaging environment empowered by sharing of screen, video, voice, camera, and message among the teacher and students
- Differentiated teaching realized by 'Group Collaboration'

4. Management – Precisely Control

- Identity-based sign-in, precisely manage every single student
- Remote control students' device (USB, Web, APP, Silence, etc.)
- Files dissemination & collection among all devices

CANON FOR EDUCATION

As the world becomes more evolved with innovative technologies, it is crucial for the higher education sector to cope with the expectations of the Gen Z & Millennials which are increasing day by day. It is evident that there is a gap between these expectations and the actual services offered by universities nowadays which students utilize daily.

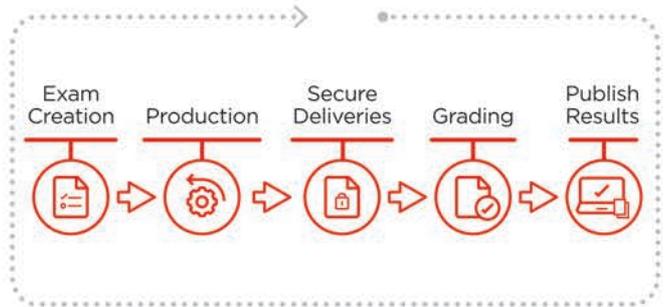

Canon Central and North Africa solutions aims to offer higher education institutions with a technologically enhanced

Canon Campus Portal

student experience and a secure learning environment for both students and teachers. The offer provides fully managed online student print services - lowering and controlling the cost of print, fully integrated and secure examination process - saving time and effort for teachers and ensuring peace of mind, and access to data analytics and reporting - providing institutions increased visibility on their operations and effectively control costs.

ACHIEVE MORE, WITH ADAPT IT

With over 33 years experience in public and private sector Education, Adapt IT provides leading specialised software and digitally-led business solutions that assist clients to achieve more, by improving their Customer Experience and Business Administration.

Our extensive experience is reflected through a portfolio of over 1 000 institutions, supporting over 2 million students globally. Founded in Africa, we offer the full life cycle of solution development, implementation and support. Our reach extends to Europe through our office in Dublin, and to Asia Pacific where we have a formal presence in Singapore, Australia and New Zealand.

Our Pan African growth strategy has extended Adapt IT's reach to Ghana, Uganda, Kenya, Namibia, Botswana, Lesotho, Swaziland and Mauritius.

In Ghana, Adapt IT enjoys successful partnerships of almost 30 years. In addition to the University of Ghana Legon, GIMPA and Central University (CUC), we proudly welcome the University Education of Winneba to our list of top tier institutions utilising our leading software, to achieve more.

Our portfolio of products and solutions provide us the flexibility to partner with smaller institutions with as few as 100 students to larger institutions with over 100 000 students.

Luxolo Rubushe

Divisional Executive: Adapt IT Education

Our product portfolio:

ITS Integrator – A solution incorporating **integration** of student administration with finance, HR / payroll, comprehensive and **integrated compliance reporting, Self-Service** and **mobile functionality** through the iEnablers.

Artena - A **web-enabled online student life cycle management system** which allows users to track and manage students from their enrolment to graduation.

ICAS – **A Student Management System** purpose-built for the private higher education sector and corporate training sector. It is web-based solution and subscription based for cost effectiveness in order to respond to the ever changing needs.

Wisenet – **A Learning Relationship Management tool** that meets the needs of all **training organisations** in compliance, learner engagement, automation, documentation, employers and agents and management reporting.

CELCAT – A complete state of the art **Timetabler Solution** for optimising **resource utilisation, timetable publication, ad-hoc room booking, attendance tracking, and pay claim management.**

Our Digital Research and Innovation Unit, through our SMART CAMPUS framework is executing a strategy underpinned by four pillars, namely Mobile, Cloud, Big Data / Analytics, and eLearning. Notable successes include:-

1. Chatbots - successful introduction of Chatbots into higher Education
2. Mobile Asset Scanning and Verification - use of mobile devices to scan assets and create an audit-compliant asset register
3. SIVS Student Authentication - creation of an authenticated identity of a student, enabling application of an electronic signature.
4. Digitised Attendance - use of biometric and facial recognition to track attendance to campus, class and accommodation infrastructure
5. Student iEnabler - online and mobile platform allowing students to apply, register and pay online, obviating the inconvenience of long queues for students and staff
6. Finance iEnabler - automated workflow for procure to pay processes
7. Payroll iEnabler - online application and approval of leave for staff
8. JasperSoft Reporting - cutting edge reporting platform providing automated and customisable reports

We welcome the opportunity to work with you to create value and assist your institution to Achieve More.

HELPING YOU SHAPE THE NEXT GENERATION OF LEADERS

We provide expertise spanning over 33 years as a global provider of comprehensive administrative ERP solutions for higher and further education institutions.

Adapt IT Education's ITS Integrator product suite, which is suitable for medium to large institutions, provides a rich set of functionalities to enable back-office and front-office operations, as well as self-service functions for students and personnel alike.

We pride ourselves on long standing client relationships and our personnel's passion for service excellence.

Talk to us about meeting the challenges of your environment.

Transforming lives by improving education around the world

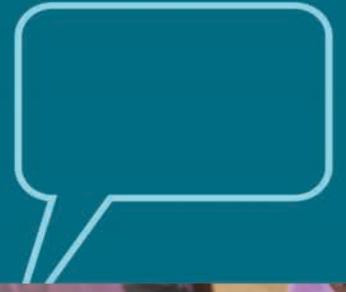

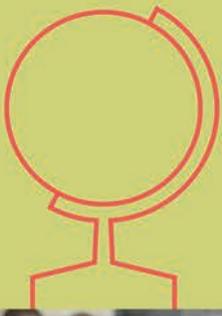

Education Development Trust is a not-for-profit organisation that transforms lives around the world by improving school systems at scale. Headquartered in the United Kingdom, we have been working with governments and donor agencies to effect and embed sustainable change for over fifty years.

Our specialist knowledge and authoritative research mean we design and deliver effective, far-reaching solutions which are evidence informed. We have supported clients in over 90 countries with needs ranging from rapid technical assistance, through to designing and delivering longer term programmes across a region or country – operating at scale with highly contextualised solutions.

We have worked, and continue to work, in many countries across Africa, including in leadership and improving learning and transition of girls through primary school in Kenya, rebuilding the education system and improving literacy and numeracy in Rwanda, and strengthening systems in Somalia and Ethiopia.

A key priority for Education Development Trust is to continue supporting leaders across the region to move forward and deliver ministry priorities, embracing the potential of technology and innovation in schools, and ensuring impact can be realised system-wide, particularly where resource-poor systems face challenges in capacity and capability.

Africa: US\$300m for STEM skills development

The African Development Bank is partnering with the Association for the Development of Education in Africa and the African Union to launch a US\$300 million fund to support the development of technical and science education on the continent.

The African Education Fund will finance training in post-secondary education including Technical Vocational Education and Training, STEM and Science, Technology and Innovation skills.

It will be a “unique” Africa-initiated, continental level education fund designed, led and managed by Africans, and will become operational in 2020 according to the fund’s coordinator Sydney Tetteh.

“The objective of the AEF is to primarily pool domestic resources mobilised together with Regional Member Countries and complemented by multilateral and bilateral contributors, the private sector and philanthropic foundations to finance projects that would contribute to human capital and skills development across Africa,” Tetteh told the PIE News.

According to the official, it will be financed through a mixed model of grants and concessional loans, with grants focused on technical assistance to countries.

The aim is to help increase domestic revenue generation to support education financing, education policy review and development in AEF focus areas, reforming curriculum, and in financing research and knowledge generation.

“Low-cost loans and some grants will focus significantly on infrastructure and equipment financing in identified key areas”, Tetteh disclosed.

Besides complimenting other education financing initiatives on the continent, the AEF, Tetteh added, is different in that it focuses exclusively on Africa, and mobilised African resources entrenching local ownership and accountability.

He said it responds to African rather than global educational priorities by earmarking funds for specific purposes to meet Africa’s needs, while insulating education and training from effects of “volatile and unpredictable” financing from external partners.

A joint declaration issued last month after an AEF workshop in Abidjan, Ivory Coast by representatives of government and regional economic blocs reinforced its support for the establishment of the fund, with Ivory Coast’s minister for Education Kandia K. Camara asking countries to be accountable and to take ownership of Africa’s education and training. He encouraged AEF proponents to pay special attention to supporting the vulnerable including girls and people with disabilities in the structure of the fund.

“The African Education Fund is a vision many education stakeholders have had but could not put into practice, it is no longer just a vision – it is a reality,” Oley Dibba Wadda, the Bank’s director of Human Capital, Youth and Skills Development said at the event.

Maina Waruru is a freelance journalist based in Nairobi, Kenya and specialising in science and higher education reporting. He has over 15 years of experience and has been published by the BBC Online, the New Scientist, the Scientist Thomson Reuters Foundation, University World News and Scidev.net.

TVET SKILLS
The backbone of
industrialisation

Smart technology is key to Rwanda's future

Buzzwords such as blockchain, artificial intelligence and robotics are smart technologies changing the face of industrial processes and production globally. The question is, how are African countries positioning themselves to harness the opportunities and benefits of acquiring and adapting new technologies into their production processes?

Rwanda understands the urgency and speed of this technological age, and that the only path to industrial growth is through development and integration of science, technology and innovation into enterprises. This is evidenced in Rwanda's Vision 2050 and the Seven Year Government Programme (2017-24), both national frameworks that aim to establish Rwanda as a globally competitive knowledge-based economy and create 214,000 decent jobs annually.

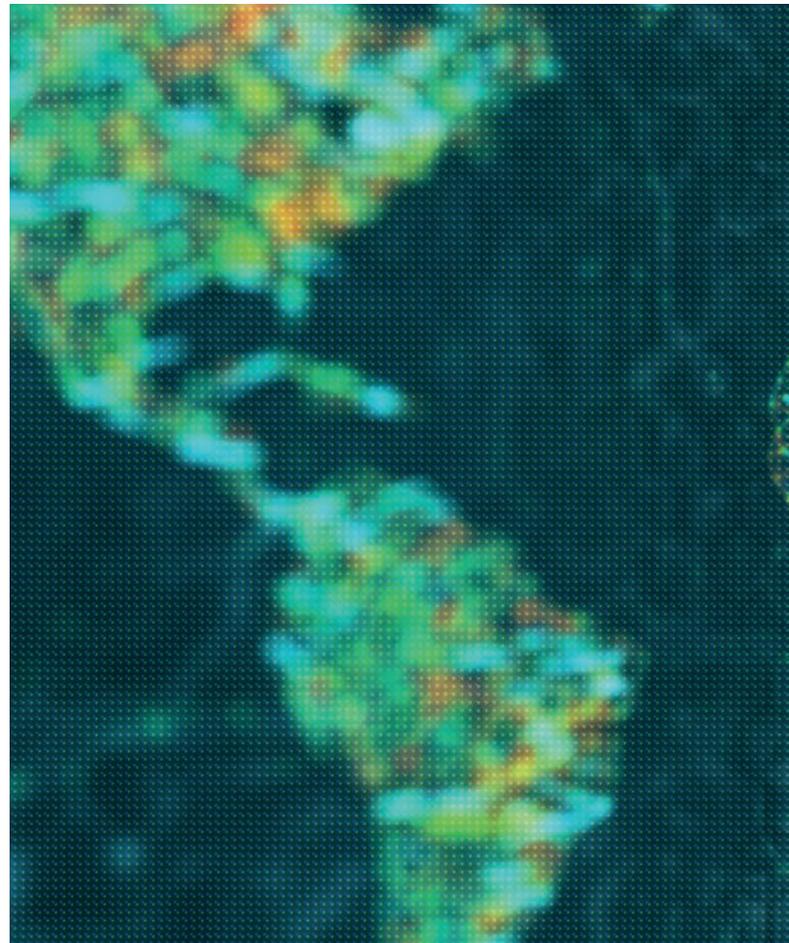

Made in Rwanda campaign

The Made in Rwanda campaign was set up in 2014 and spearheaded by key stakeholders such as the Rwanda Development Board, the Rwanda Private Sector Federation and the Ministry of Trade and Industry. This initiative is to essentially reduce the country's trade deficit and promote consumption of locally produced goods and services.

This was the first of several strategies to stimulate the domestic market and address issues faced by small and medium enterprises (SMEs), which make up 98% of businesses in the country. Rwanda's formal trade deficit was reduced by 21.7% in 2017, partly due to of strategies such as the Made in Rwanda Campaign.

The campaign has boosted various industries in Rwanda, especially in the garment sector. Nonetheless, there is still a challenging journey ahead if we are to grow local industries and make them competitive.

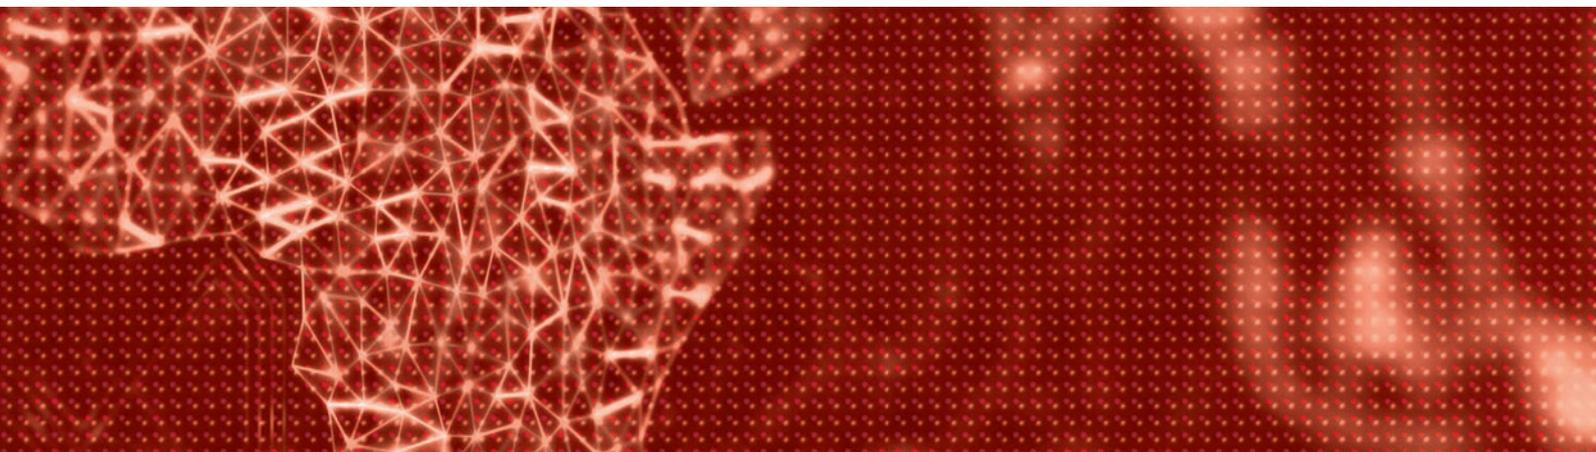

“The future of work lies in how well we train young innovators to design, prototype and most importantly, dream.”

Key industry players in Rwanda are primarily engaged in the production and processing of wood, tobacco, cement, textiles, agro processing, small scale beverages, soap, furniture, shoes, plastic goods, tea and coffee. Others include chemicals, construction, printing, engineering and methane gas.

Among such challenges, many have cited Rwanda's land-locked geographical position; a small private sector; and lack of innovation, amongst other things. However, all this can be changed by smart technologies that drive industries forward as the country positions itself as a regional ICT Hub.

The most obvious solution is to infuse modern technologies into enterprises to boost Rwandan industrial growth.

Integrating smart technologies

Aware of the low levels of acquisition and adaptation of technology by Rwandan industrial firms, government and the private sector have embarked on the first of many interventions aimed at boosting competitiveness. For instance, the National Industrial Research and Development Agency (NIRDA), will support the acquisition and adaptation of technology for firms through thorough audit systems, and thus reduce the cost of adoption.

The 2018 NIRDA Open Calls Programme aims to equip selected enterprises with technological skills that will increase productivity using appropriate technology. It goes without saying that such an approach is not doable without having government agencies serve the private sector directly, providing training and encouraging innovation.

The future of work lies in how well we train young innovators to design, prototype and most importantly, dream. What better way is there to create sustainable frameworks than by training talented youth as future custodians of smart technologies not only in Rwanda, but across the continent? Fears of “robots replacing humans”, misplaced or accurate, have been expressed globally with the common perception of a “jobless future”.

Disruptive technologies have always brought with them both positive and negative effects. McKinsey’s 2017 report on automation estimates that high percentages of jobs in African countries will be automated – 52% in Kenya, 46% in Nigeria and 50% in Ethiopia. Industry 4.0 does not only lead to job losses due to automation, it also creates unprecedented opportunities for our youth to move into new types of jobs based on problem-solving, creativity and innovation. We need to prepare our youth for those opportunities.

Urgent business

The common thread running through Rwanda’s focus on reducing its trade deficit and diversifying its export base is to use smart technologies to develop its nascent industries. This approach is the future, as today’s socio-economic fabric is interwoven with technology.

It is urgent that we understand and leverage early adoption of new technologies to increase industrialisation, not forgetting that they must be affordable, sustainable and environmentally friendly. The quicker we do this, the faster Rwanda’s vision of becoming a knowledge-based economy will happen.

Kampeta Sayinzoga is director general of Rwanda’s National Industrial Research and Development Agency (NIRDA)

'Factory of factories' helping start-ups in Kenya

[NAIROBI] Esther Mwangi, a 2014 graduate of economics from Kenyatta University in Kenya who wanted to venture into entrepreneurship but had no clear path, started off selling solar panels in coastal parts of the country as she conducted market research on other possible ventures.

"I was shocked to come across statistics showing that 65 per cent of women in Kenya could not afford sanitary towels in 2016," Mwangi told SciDev.Net. "This really touched me and moved me into thinking of how I can help provide a solution in the country."

One in every ten girls in Sub-Saharan Africa miss school during menstruation and this could affect the goal number four on quality education of the UN's Agenda 2030 on sustainable development, according to the UNESCO.

When Mwangi moved to Nairobi and visited schools in the city's informal settlement areas, her interactions with girls confirmed that majority of them lacked access to sanitary pads.

"Some were even using sponges and other unsafe pieces of clothes. As a result they could skip classes during their menses," Mwangi narrated to SciDev.Net.

Mwangi decided to build a vending machine for providing affordable sanitary pads. While sharing the idea with a friend who worked at iHub in Nairobi, she learnt about Gearbox.

"I went to Gearbox and shared my idea. I wanted this to work. I had no engineering background but I had the passion to move it," she explained. "At Gearbox, an engineer helped me design [the] pads vending machine. Additionally, Gearbox got me a grant through a philanthropist to actualise my design and have vending machines that are available and accessible 24 hours a day."

"The passion and working work really matter in order to be successful in entrepreneurship in the field you are venturing in."

Gearbox is a hardware accelerator venture in Kenya that helps potential inventors such as Mwangi to get space for hardware design, training, mentorship and finally actualise ideas.

Why hardware accelerator was formed

Kenyan engineer Kamau Gachigi realised in 2008 that most of the tech start-ups were in software development. In 2011, Gachigi came up with the idea of setting up a space for hardware incubation in Kenya called Gearbox. At this venture, people including those without formal engineering education with innovative ideas are given access to machines they can use to design and actualise their innovation.

"At the University of Nairobi, I was teaching engineering students who had bright ideas that I knew could contribute to the challenge of industrialisation if they had access to equipment," said Gachigi recalling how access to facilities could enable students to test their ideas.

A holder of US patent for innovation, and an academician, Gachigi set up Gearbox in 2011 to help bridge the gap of inadequate engineers needed for Africa's industrialisation. The space operates like a community that brings like-minded people to work together and create products that meet international standards and customised to Africa to address the problems on the continent.

Addressing the TED Global Conference held in Arusha, Tanzania in 2017, Gachigi said there is a need to create an environment in Africa that allows the few engineering students and graduates to test their ideas and start businesses.

“Most governments in Africa have a plan for economic growth anchored on industrialisation such as the Kenya’s Vision 2030,” said Gachigi, adding that the world is going through an industrial revolution.

Gachigi, who has a doctorate in solid state science, said that his interactions with Kenyans, especially those who had not accessed formal education, showed that they had good ideas that if turned into products could help transform livelihoods.

Creating affordable innovations through Gearbox

Through her venture called EsVendo, Mwangi has placed sanitary towels vending machines in two slums of Kibera and Kawangware in the outskirts of Nairobi. The venture is an innovative distribution system that operate like ATM machines where one can collect a pad upon payment anytime.

They are placed at strategic points in the slums where girls can easily access them and also in hospitals where adult women can access them. This has increased access to sanitary towels and reduced the stigma of not using them among school girls, according to Mwangi. The girls in the areas can now buy a pad at ten Kenyan shillings (about ten US cents) compared with the price of most pads in the market that go for about 70 US cents.

The story is not different for June Kimani, whose venture, housed at the Gearbox centre, works on popularising existing sewage treatment technologies exported from Japan.

The venture called Usafi Comfort, gives wastewater treatment technologies such as water-saving devices and wastewater recycling solutions to residential and commercial needs across Eastern Africa.

“This holds the promise of a new industry with many jobs, better healthcare outcomes thus stretching universal healthcare further, enabling affordable housing off-the-grid, conserving the environment and fixing a pervasive dignity deficit,” Kimani explained.

Although the technologies are still expensive to be used in many settlements in the country, Kimani said that they are working on affordable innovations for Kenyans.

“Gearbox has given us space to rent at affordable rates and they are patient when rent is late as is normal with start-ups. This enables us to survive through tough times,” Kimani added.

She explained that Gearbox also provides “an ecosystem from which we get engineering experience that enables us to have an elastic workforce without having to employ a large staff full time”.

This involves many engineers from the venture who can be hired on either part-time or short-term basis. “This space attracts many visitors some of whom become our clients and other partners in working to improve technologies,” Kimani told SciDev.Net.

According to Kimani, early this year, her venture needed to assemble control panels locally to save on import duty, an exercise that was done successfully thanks to the expertise from Gearbox engineers.

Kenya and other African countries will require more advanced infrastructure for sewage management in buildings, she said, to progressively reduce the volumes of untreated sewage being released into the environment.

Gearbox inventors have created a space of about 25,000 square feet for potential hardware developers to create globally competitive innovations. As of May this year, Gearbox has enabled 22 start-ups to design hardware that they use to address common challenges facing people in Kenya, says William Maluki, head of engineering at Gearbox, Kenya. These include Paygo Energy venture that develops a clean energy distribution service which enables people to pay and access cooking fuel globally.

“Start-ups need space to work, to continue improving their products or ideas, to write emails, and even proposals for funding and that’s what Gearbox gives,” Maluki explained.

Gearbox led to the formation of Gearbox International Foundation in 2017 as a platform to be used to help others in low and middle-income countries around the world to build similar ventures. The Foundation also shares lessons learnt from the challenges that faced the development of Gearbox in Kenya with new hardware manufacturing space makers to enable them work easily.

'Factory of factories' helping start-ups in Kenya

Solving development challenges

According to the Gearbox Foundation, hardware solutions are required to solve many challenges such as sanitation, food security and access to affordable housing faced by developing countries.

The Foundation says that at least 11 of the 17 UN Sustainable Development Goals including access to clean water and sanitation, and decent work and economic growth will require hardware technology development or the cost-effective adoption of existing hardware technologies.

Phylis Wakiaga, chief executive officer of the Kenya Association of Manufacturers, says that ventures such as Gearbox play a critical role in driving the growth of the economy through employment and wealth creation, adding that start-ups are the future large companies, which will position Kenya and Africa in the global market as a force to reckon with.

"Innovation is critical for the sustainability and competitiveness of local industries in the light of a changing world," Wakiaga tells SciDev.Net. "Providing incentives such as reduced cost of energy, tax incentives, and low cost of raw materials that will reduce the overall cost of production will in turn encourage local industries to increase their production and investment in research and development leading to more innovation in industries."

Plans to reach more innovators

According to Maluki, start-ups could access space at Gearbox through two ways. First, they could become members by registering after paying US\$100 a month for daily access or US\$40 for two days a week. This enables innovators to access equipment and co-working space. Alternatively, they could rent unused space on the premises.

"Gearbox has given us space to rent at affordable rates and they are patient when rent is late as is normal with start-ups."

"We want to have an ecosystem of like-minded entrepreneurs and innovators who work on hardware products," said Maluki.

Maluki says that local hardware developers were previously not progressing because they had to import almost all the raw materials including design services. "This made hardware development extremely expensive, a gap that Gearbox has largely bridged," said Maluki, explaining that Gearbox gives most of the services, such as design freely.

He adds that hardware development is challenging because it involves a lot of logistics, designing, with some of the products created as a result of importing designs being inappropriate for the local markets and thus not solving the problems facing people.

Gearbox inventors plan to open up satellite spaces in other parts of the country including rural areas to open up space for more people to invest in hardware technology. "This should not leave any innovator behind, even those in remote parts of the country should access services and space provided for by Gearbox," Maluki said.

Currently, Gearbox is working with the Red Cross to establish a satellite hardware innovation space in Lamu County, coastal Kenya.

"There's a growing interest in what we do. Recently, Laikipia County governor requested us to establish mobile classrooms to build the capacity of students from his county," said Maluki. "We want more young people to take advantage of equipment here to strengthen especially engineering training which is more practical in an industrial space that we offer. We need more spaces accessible to youth to innovate and create hardware that can help solve challenges facing the common people in Africa."

But for ventures such as Gearbox to expand and trickle down to improve economies, Maluki said that African governments need to support them.

This is because Gearbox is modelled after similar ventures in the United States that require a lot of funds. However, the over-reliance on donor funding threatens its sustainability and could fold up if not properly funded like some in the United States which have closed down.

For example, lack of funding makes the purchase of some of the machines such as Tormac CNC milling machine, Gearbox inventors want to use impossible. Maluki urges governments to support the venture by reducing tax on importation of machines and equipment to be used in the space.

“These machines will be used in building the capacity of our young people and providing opportunities for inventors to create,” explained Maluki. “This eventually creates jobs and can help employ a large number of young graduates who are unemployed. Failure by the government to support such ventures as Gearbox is like shooting at its own feet.”

Gearbox has attracted many prominent people globally especially technology entrepreneurs who have heaped praise on the venture. For instance, during a tour of Africa in 2016, Facebook’s chief executive officer Mark Zuckerberg visited the premises of the venture to meet innovators and was amazed with the technological work being done.

Two years later, British business experts who accompanied the country’s Prime Minister Theresa May to Kenya also visited the premises and talked to hardware innovators who pitched their ideas to them.

“This shows the interest in what hardware tech inventors are doing in Kenya and Africa is gaining prominence and many people could invest so long as they are convinced the product is market ready,” Maluki said.

Impacts on student trainees

Gearbox also has an academy that trains university students and give them hands-on experience to build their capacity. “We use mastery-based methodology where we expose trainees to material and evaluate them until they master the content,” Maluki added.

The academy trains students to master topics such as machine learning, artificial intelligence, programming and human-centred design approaches, among others.

The trainers are drawn from within the workforce of Gearbox and industry experts with knowledge of various fields that subscribe to Gearbox’s work.

Last year, engineering students from the University of Nairobi, Jomo Kenyatta University of Agriculture and Technology, Technical University of Kenya and Kenyatta University began attending training sessions at the academy.

The academy also provides avenues for students to collaborate internationally and co-create hardware. For instance, early this year, Nairobi Design Institute hosted an event where students drawn from Kenyan universities who were undergoing training at the Gearbox academy interacted with students from UK universities to co-create hardware technologies. Gearbox also trains students from mid-level colleges and polytechnics and gives them access to equipment to learn practically.

Gachigi challenges young people in Africa to make use of the internet in researching and adding knowledge to understand the ecosystem of the ideas that they have as this would help in developing greater innovations that can improve livelihoods.

“But the passion and working hard really matter in order to be successful in entrepreneurship in the field you are venturing in,” he told SciDev.Net.

A *learner-driven revolution* in education is unfolding around the world.

That's the message from the 11,000 people who responded to the inaugural Pearson Global Learner Survey, a new study capturing the opinions of learners worldwide.

We are in the midst of the single biggest economic shift since the Industrial Revolution. Technology, automation, globalisation and an unpredictable political environment are affecting everything about our world – especially work and education.

Learners want more vocational education, soft-skills training and bite-sized learning across the course of their lifetime.

of people believe they need to improve their soft skills to be competitive.

Learners are relying less on traditional institutions that have shaped learning for generations and are adopting a “do-it-yourself” approach to education by embracing technology and online learning.

Virtual learning for children, online degrees and stackable microcredentials for adults, and on-demand learning for everyone, can help meet the needs of today's sophisticated learner.

Governments, educational institutions, employers and innovators are uniquely positioned to apply their vast and unique expertise to help drive this change.

More employers now see education like healthcare, as an employee benefit. Vocational training, like Pearson's BTEC or LCCI offering, is giving people more career pathways than ever before.

Employers could be working together with learning institutions to re-skill their workforce. Universities should expand access to mid-career adults with short courses, soft-skill training and stackable credentials.

of people say attending trade school leads to getting a better job than just having a university degree.

But we shouldn't stop there. We should be building a wider ecosystem to meet the needs of the learners in our study. Innovators and education companies can use technology to make education engaging and accessible, and government can help address ways to make education more affordable and widely available. By embracing learners and listening to their voice, we can all help lead the growth of a new economy.

This is the greatest opportunity in human history to reinvent learning to meet the needs of the new economy.

I look forward to seeing the progress we will achieve together to make the learner's vision a reality. Here's to all the learners around the world!

John Fallon, CEO Pearson

About Pearson

Pearson is the world's leading learning company. We're on a mission to help people make progress in their lives through learning.

We partner with governments, learning providers, and employers to move that mission forward. Keep up with today's top issues in education with us and find out more about our career-focused education with world class vocational qualifications such as BTEC, Higher Nationals and LCCI.

Online HE platform raises \$28m to provide tertiary education in Africa

Global literacy project Curious Learning is on a mission to bring 100 million children to fluent literacy by 2025 by utilising mobile technology for learning.

Unicaf, the largest online HE platform in Africa, has raised \$28m to expand its university education offering across the continent. The company also provides numerous scholarships for higher education across the UK, US, Africa, and Europe.

New funding will allow Unicaf to grow its enrolment from its current 16,000 students to over 100,000 in the next five years. There are currently approximately 850 universities in Africa, with a total capacity for around 11 million students. However, according to Unicaf, the continent is predicted to need an additional 50 million university places by 2030, as the 18-25 age group increases from 100 million (2010) to 150 million in 2030.

Programmes from Unicaf are designed to provide graduates with essential employment skills, and more than 85% of Unicaf graduates are currently employed.

Jules Frebault, executive director at Goldman Sachs, a major investor in Unicaf's new funding, said: "Unicaf is deploying a tech-enabled solution to African markets for easy and affordable access to quality higher education that is uniquely suited to address the widening university supply-demand gap and skills shortages across the continent."

Unicaf utilises the wide usage of mobile devices in Africa to disseminate its content, and approximately 80% of students currently study online using mobiles. According to the GSM Association, the number of mobile subscribers in sub-Saharan Africa has increased by 18% per year between 2007 and 2012. The penetration rate is forecast to reach 50% by the end of 2023, and 52% by 2025.

"This tech-enabled solution is uniquely suited to address the widening university supply-demand gap and skills shortages."

However, most sub-Saharan African countries have a limited supply of electricity and internet, meaning resources are made available to download so that students can continue their learning even when they no longer have an internet connection.

Currently, fewer than 10% of potential students in sub-Saharan Africa have access to higher education, making it the most underserved region in the world. In addition to this, access to primary and secondary education in the area is increasing, causing rising demand for tertiary-level education.

More information about Unicaf, its investor and partners, can be found at unicaf.org

Innovation Africa 2019 welcomes the following Corporate Partners

Digital Services Partner

Vodafone Ghana

Vodafone Ghana is an operating company of Vodafone Group Plc – the world’s leading mobile telecommunications company, with a significant presence in Europe, the Middle East, Africa, Asia Pacific and the United States. Vodafone is a leading total communication solutions provider in Ghana – delivering mobile data and voice; fixed voice and broadband, mobile financial services and a Fibre backbone service for the West African sub-region. It is the second ranked operator in terms of market share in Ghana, with over 10million subscribers.

The company has a deep sense of responsibility and commitment to social development in Ghana. This it achieves by conducting all operations in a responsible manner with a relentless dedication to regulatory compliance.

Vodafone Business (VB), a specialist business unit within Vodafone, serves large, medium and small businesses as well as government agencies in Ghana by providing network based IT and communication solutions. VB supports businesses to make the best investments in communication that will help them connect better with their customers and internally with their staff. VB has, over the years, empowered thousands of businesses in Ghana to grow, cut costs, increase efficiency and improve profits.

Diamond Partners

Cambridge

As part of the University of Cambridge, our mission is to contribute to society through education. We do this by working alongside governments and national education bodies to improve quality in education systems by drawing on research and our extensive international education experience.

Through sharing knowledge and expertise of our Cambridge organisations, we develop local capacity and skills, and create bespoke programmes, qualifications and publications that promote education excellence. Together, we aim to: raise educational attainment; improve education equity and; lead teachers and learners to a lifetime of achievement.

We achieve this by working in partnership with governments and public bodies to: design innovative education programmes; publish high-quality teaching and learning resources; support and develop teachers and school leaders; create and implement new assessments and; provide strategic input to education system development.

We are delighted to support Innovation Africa as a Diamond Partner in 2018 and we look forward to meeting you in Harare in November.

Canon Central & North Africa (CCNA)

Official Imaging & Digital Print Partner

Canon Central and North Africa (CCNA) is a division within Canon Middle East FZ LLC (CME), a subsidiary of Canon Europe. The formation of CCNA within CME in 2015 is a strategic step that aims to enhance Canon's business within the Africa region – by strengthening Canon's in-country presence and focus. CCNA also demonstrates Canon's commitment to operating closer to its customers and meeting their demands in the rapidly evolving African market. Canon has been represented in the Africa continent for more than 15 years through distributors and partners that have successfully built a solid customer base in the region. The fast-growing African market was earlier served through Canon's office in the UAE, established in 1998. Subsequently, Canon Middle East FZ-LLC (CME) was formed as a free zone company, with the remit to expand its presence in Africa.

As part of the geographic expansion, CME added Egypt, as part of its markets in 2000. A representative office was established in Cairo in 2001, followed by the transfer of 21 countries in Maghreb and West Africa to CME in 2005. CME continued to strengthen its presence in Africa with the opening of a local office in Morocco, transferring under its remit the East Africa territory in 2011 and establishing an office in Kenya in 2012. To strengthen its logistics efficiency in Africa, Canon opened up a new shipping distribution hub at Spain in 2014 to serve the Maghreb, West Africa and Libya markets efficiently. This added significant value to the business opportunities of the partners in these countries. By continuously investing in enhancing the supply chain and being closer to customers, Canon has now created a high value proposition with the setting up of Canon Central and North Africa within CME. It will ensure the provision of high quality, technologically advanced products that meet the requirements of Africa's rapidly evolving marketplace.

Canon Central and North Africa will manage sales and marketing activities across 44 countries in Africa, and has more than 100 employees. It will be responsible for all aspects of business in North, East, West and Central Africa meeting customer demands in the region. CCNA will have increased on-ground support from Canon to customers in the region. Canon's corporate philosophy is Kyosei – 'living and working together for the common good'.

Education Development Trust is a not-for-profit organisation that transforms lives around the world by improving school systems at scale. Headquartered in the United Kingdom, we have been working with governments and donor agencies to effect and embed sustainable change for over fifty years. Our specialist knowledge and authoritative research mean we design and deliver effective solutions based on evidence. We have supported clients in over 90 countries with needs ranging from rapid technical assistance, through to designing and delivering longer term programmes across a region or country – operating at scale with highly contextualised solutions.

With a longstanding commitment to improving education across the region, Education Development Trust combines regional expertise with extensive international expertise to design sustainable education programmes. Whether it is to address gender inequality, access to education, accountability or the quality of teaching and learning, we work hand in hand with ministries of education and donor agencies to effect long-term change. We have worked, and continue to work, in many countries across Africa, including system leadership and improving learning and transition of girls in Kenya, rebuilding the education system and improving literacy and numeracy in Rwanda, and strengthening systems in Somalia and Ethiopia. In addition we have carried out many rapid-response, research-informed technical contracts across the continent through our team of expert consultants.

This substantial experience gives us a strong understanding of local education systems and the importance of working in a flexible, responsive way from relationships built on trust. We remain committed to supporting the region to achieve better educational outcomes for their young populations. A key priority for Education Development Trust is to continue supporting leaders across the region to move forward and deliver ministry priorities, embracing the potential of technology and innovation in schools, and ensuring impact can be realised system-wide, particularly where resource-poor systems face challenges in capacity and capability.

Pearson

Pearson is the world's leading learning company that helps people of all ages to make measurable progress in their lives through learning. We partner with governments and institutions to create innovative solutions to improve learner achievement and institutional effectiveness. Pearson supports learning from the time a child enters school and throughout his or her educational journey.

We create and connect content, technology, assessment and services to offer unique learning solutions. We deliver services that can help schools and academic institutions achieve their goals. We've acted as consultants to governments and institutions on education, professional development and curriculum redesign. For more than a decade, we have worked with educators and learners to track learning gains and we hold ourselves accountable for not just the products we make, but also for the results we deliver.

Our depth and breadth of experience in education and our commitment to learning sets us apart. Every day, 40,000 Pearson employees in 80 countries strive to bring better, more personalised learning experiences to our customers.

www.pearson.com

Gold Partners**Avanti**

Avanti is a world-leading provider of agile, secure and pioneering satellite technology across Europe, the Middle East and Africa. We are enabling businesses, governments and people in more than 118 countries to be more secure, empowered and prosperous. Our network of high-throughput satellites and dual-redundant Gateway Earth Stations enable our team on the ground to go the extra mile, even in the most remote or demanding of situations, delivering high-speed satellite connectivity and coverage to an end-market of 1.7 billion people.

Haier

Haier International Smart Education company, holding "To become a global leader in Smart Education Solutions" as the corporate vision, "Make the Education Smarter" as the mission, and "Focus & Open up, Co-Create & Win-Win" as the value, is committed to achieving the equity and quality of global education. Combining education with science and technology, Haier International Smart Education Company has launched HiBook – Smart Hardware solution, HiClass – Smart Class solution, and HiSchool – Smart Campus solution, to build the education industry ecology. HiBook Solution, combining digital resources with teaching hardware, launched a wide range of products including HiBook Cloud, Chromebooks, CMPC, desktop, notebook, all-in-one, tablet PC, VR / AR, e-book, smart pen, etc.; HiClass Solution focus on "hardware + applications + contents"; deploy "super blackboard + super desk + super podium" as carrier, implements six smart class solutions: interactive class, flipped class, remote class, maker class, lecture captured class and MOOC.; HiSchool Solution integrates application, service and management for a campus ecology system through the construction of Campus Cloud, Campus Network and Campus Energy.

Under the guidance of "one belt and one road" policy, and in cooperation with Google, Microsoft, Intel, Inspur and other international top resources, Haier International Smart Education company has successfully established industry accelerator, institute, and HiStar charity institution, in order to build a "Co-Create, Win-Win, Sharing" global education ecosystem with the makers and elites all over the world.

www.haier.net/en

Matific

Matific is a globally recognised, award winning online teaching and learning resource for primary school mathematics (Kindergarten to 6th Grade). Headquartered in Sydney, Australia, Matific awards include Best Mathematics Instructional Solution, Best Game-Based Curriculum Solution, and Best Educational App. Matific is currently available in over 25 languages (including Arabic) and is aligned to mathematics curricula in over 45 countries.

Matific's pedagogy combines rich content with adaptive and interactive games. The Matific content is carefully localised and mapped to each country's curriculum and popular textbooks. Children learn at their own pace, improving their quantitative skills and analytic ability in preparation for jobs of the future. Getting started with Matific is as easy as distributing student logins. Teacher training is minimal as Matific was specifically designed for easy implementation.

Matific is known for: Proven to raise test scores, reduce maths anxiety, and increase motivation to learn maths; The ideal program to support and enhance investments in ICT; Provides teachers with engaging, enquiry based maths resources and lesson planning; Offers real time student and school performance reporting; Low cost program that runs on existing infrastructure at schools; Works on all devices and offers online and offline capabilities; Supports STEM learning initiatives.

Positivo BGH

LEARN TODAY. AMAZE TOMORROW

Positivo BGH is a Joint Venture between two industry leaders in Latin America namely Positivo Informática, of Brazil, and BGH, of Argentina. Positivo Informática brings over 40 years of experience in education to the joint venture and own, run, manage and operate a university, various private schools, and Brazil's second largest theatre. Positivo also owns education technology research centers that develop leading edge solutions deployed at educational institutions both private and public across the globe.

BGH one of the most respected companies in Argentina with over 100 years of experience is the undisputed market leader in designing, developing and the manufacturing of consumer electronic goods. Positivo BGH can be seen as the international arm of these two great companies, standing on its own two feet and operating in its own right, with manufacturing facilities in Brazil, Argentina and now recently Rwanda and Kenya.

Even though Positivo BGH has managed a dominant market share in the manufacturing of notebooks, desktops, all-in-ones, tablets and mobile phones in its native Latin America, education is and will always be embedded in its DNA. The company's mission is to make technology accessible to transform people's lives. Positivo BGH Wise – our education division – offer high quality solutions to meet educational needs; from the delivery of devices and specialized software to training of teachers and students on this new way of learning. We maintain a leading global position in education projects. Positivo BGH Wise: a new Generation, a New Way of Learning.

www.positivobghwise.com

Silver Partners**AbleNet**

AbleNet is a leading developer, manufacturer, and global distributor of assistive technology solutions. AbleNet's assistive technology solutions are used by individuals with disabilities in the classroom, in the home, and in the community. Assistive technology from AbleNet provides the opportunity to communicate, learn, and live a productive and fulfilling life. Assistive technology solutions include: Speech generating devices for communication; Accessibility switches; Computer, tablet, and mobile phone access; Mounting for speech generating devices and switches; Activity supports.

www.ablenetinc.com

Accent

We are a twenty-year-old IT Brand based in Morocco, developed and managed by challenging engineers and technicians. Today, ACCENT, a large range of products with ingenious designs and better quality/price ratio, created to satisfy all the profiles; which includes: Solutions for Education / Smartphones / KaiOS phones / Tablets / PC-Tablets / Accessories.

We provide technical support to our customers, and constantly observe their objections and behaviors to meet their needs. ACCENT has concluded successful partnerships around the world; the brand is then available in many African and European countries. Our company has been involved in Human Development and Education, by supporting many projects of Moroccan and Senegalese Governments.

www.accent.ma

ACT

ACT is a mission-driven, nonprofit organization dedicated to helping people achieve education and workplace success. Headquartered in Iowa City, Iowa (United States), ACT is trusted as a leader in college and career readiness, providing high-quality assessments grounded in nearly 60 years of research. ACT offers a uniquely integrated set of solutions designed to provide personalized insights that help individuals succeed from elementary school through career.

www.act.org

Adapt IT
Evening Reception Sponsor

Adapt IT is a leader in the ICT market through the provision of software solutions to the Education, Manufacturing, Energy, Financial Services, Communications and Hospitality sectors, employing over 1,000 technology professionals and servicing more than 10,000 customers in 53 countries. Adapt IT's South African offices are in Johannesburg, Durban and Cape Town, and international offices in Mauritius, Botswana, Kenya, Ireland, Australia and New Zealand.

www.adaptit.co.za

Amatrol

Amatrol is the world leader in skills-based, interactive technical learning. We produce hands-on training equipment, computer simulation software, and computer-based learning courseware in over 300 technical subjects such as electricity, electronics, mechanical, fluid power, mechatronics, robotics, automation, programmable controllers, industrial communications networks, and process control. Colleges, schools, and industry throughout the world use our learning solutions to build technical skills for maintenance technicians, operators, and engineers. Join us in our mission to transform the global workforce one life at a time.

www.amatrol.com

ApplianSys

ApplianSys is the world leading specialist in designing, building and supplying dedicated web cache solutions to schools – in particular to large regional or national education authorities. Founded in 2000, ApplianSys has customers in 150 countries, a network of channel partners around the world and a portfolio of products designed with schools for schools.

Connecting classrooms to the internet can transform education and enable entire nations to leap forward a whole generation. However, the sheer scale of nationwide deployments, the countless number of details that you need to plan and the high cost of reliable internet connectivity present considerable challenges and pitfalls at every step. Web caching is vital for the success of E-learning, ensuring sufficient and affordable bandwidth for all schools and delivering fast classroom content. ApplianSys is the only vendor to offer a fit-for-purpose schools caching appliance, CACHEBOX, which is at the centre of its comprehensive Education Authorities offering. It's EDUGATEBOX multi-function appliance provides caching, filtering, firewall and more, getting remote schools online easily, safely and at best value. Having worked with Education Authorities for over 15 years, ApplianSys can leverage lessons learned at each phase and across the scope of your connected classroom projects, delivering comprehensive insight to ensure successful nationwide deployment.

www.appliansys.com

Christiani

Work-based learning is a fundamental aspect of technical training – it helps learners to acquire knowledge, skills and competences which are essential in working life since they are close to the needs of industry. With its products and activities Christiani is promoting and implementing this learning model. Christiani has been active in the field of technical vocational training for over 85 years and stands for high-quality, hands-on training and continuing education. With our didactic concepts and teaching materials, Christiani is present at all locations where education takes place.

We accompany people on their lifelong journey of learning: from school, through company based training or university, to continuing training for skilled workers at any age. By means of our know-how and our wide product range, we have clearly developed into a complete supplier in the field of training and education. Our range of teaching materials primarily serves the fields of mechanics, electrical engineering, automation, automotive mechatronics and renewable energies. Whether for vocational institutes, colleges and universities or for small and medium-sized companies and major corporations: We offer to our customers guidance, conception, planning and execution as well as train the trainer courses.

Tarsus Technology Group

Tarsus Technology Group (TTG) is an innovator in Africa's technology supply chain, partnering with the world's leading IT vendors and the continent's top value-added resellers and systems integrators to deliver customer-centric solutions. Over the past decade, TTG has transformed into a value-added distribution group for the digital age. Our young and entrepreneurial team leverages advanced technologies to optimise the supply chain and deliver efficiencies to a growing community of resellers, and helps channel partners to retool their business for the cloud and digital commerce.

Established in 1985, TTG has a rich history in the IT distribution industry. Our companies include Tarsus Distribution, Tarsus On Demand, Tarsus Dispose-IT, Printacom and GAAP. Taken together, these group companies enable channel partners to deliver world-class business solutions to their clients. TTG is focusing on building a more inclusive ICT industry, creating opportunities for previously excluded people to join the mainstream economy, and building a skills base and business ecosystem that will support socioeconomic development in South Africa.

Recognised as a Level 1 broad-based black economic empowerment entity, TTG is the foremost black-empowered technology solutions partner for the channel. The group and subsidiary companies are recognised as black-owned, black female-owned and black designated businesses under the Amended ICT Sector Codes. TTG has an African footprint with branches in Namibia and Botswana and with representation in Zambia, Zimbabwe, Malawi and Mozambique.

UC-Wireless

UC-Wireless distributes Integrated Wireless Communication Solutions throughout Africa. Working with local partners through skills transfer, we connect rural and urban education & healthcare facilities via multi-site “mesh” links, extending fiber-optic connectivity. We deploy cloud-managed high performance secure integrated e-learning and Wi-Fi connectivity while also delivering public Wi-Fi resulting in sustainable solutions with ROI including analytics, business intelligence and management reporting.

UC-Wireless is an Africa Distributor of: Rauland, Linkyfi, Nomadix, Spectralink, Sagittar, Omnitronics and UC-Ruckus.com Cloud Managed Ruckus Wi-Fi. We serve multiple markets, but specialise in Education, Healthcare and City Communication & Public Wi-Fi (Smart Cities).

www.uc-wireless.com

Whizz Education

Whizz Education is an innovative education company that partners with Ministries of Education and Donor Organisations to raise standards in learning, with specialism in maths, through the use of online virtual tutoring, teacher-led digital resources and the application of best practices. We believe that every child deserves a learning experience that caters to their individual needs and pace of learning. Our international expertise at large scale regional deployments puts students at the centre of the learning experience, supported by capacity building of teachers to deploy ICT for superior outcomes (as opposed to ICT for the sake of ICT). Through our expertise and collaborations we address issues of marginalisation, the digital divide, as well as the poverty and gender gaps prevalent in many environments. The current Avanti-led Imlango project in Kenya is an example in which Whizz is working with multiple stakeholders for capacity building of teachers in 200 rural communities to deploy digital learning resources in maths and literacy, as well as supporting 100,000 pupils, many of them marginalised, with personalised virtual tutoring in maths.

www.whizz.com

WOWBii Interactive is Africa's first original equipment manufacturer of interactive touchscreens. Founded in 2015, WOWBii is transforming the way Africa works and learns by redefining meeting room and classroom technologies. WOWBii's interactive and immersive solutions feature integrated computing, cloud-based infrastructure, wireless connectivity and cross-platform compatibility, giving users instant access to information, content and applications.

WOWBii offerings are flexible and adaptable, coming with unparalleled customer support and warranty. Offerings include BUDDRoom™, an interactive meeting room solution that allows meeting participants to meaningfully communicate and collaborate in ways not possible in traditional meeting rooms; and BUDDZone™, a learning area offering educational itinerary designed to enable educators use technology resources to drive interactive learning. As a proudly-African brand focused on providing simple yet durable products, WOWBii aims to be the preferred interactive solutions provider on the continent.

Benetech

Our work transforms how people with disabilities read and learn, makes it safer for human rights defenders to pursue truth and justice, and connects people to the services they need to live and prosper. We're constantly pursuing the next big social impact. Our mission is to empower communities with software for social good. We achieve our mission by uniting two worlds: the social sector and Silicon Valley. We serve as a bridge between the social sector and Silicon Valley by working closely with both communities to identify needs and software solutions that can drive positive social change. In the area of education, we endeavor to make learning accessible and inclusive to all people, including those with learning differences or disabilities. Through initiatives like Bookshare, the world's largest ebook library for people with blindness, dyslexia, and other reading barriers, we make it easier to read with ebooks in accessible formats and make it possible for people with disabilities to pursue education, gain employment, and enjoy leisure reading.

www.benetech.org

CodeJKA

CodeJKA.com is a vocational coding program for high-schools. Our mission is to create awesome experiences, cool online tools and fun curriculum to support the youth of today and leaders of tomorrow. Our vision is for youth to have monetizable digital skills before they leave school. The CodeJKA Web Development curriculum aligns with industry standards and is rolled out as a non-core subject or elective in high schools. It allows Education Authorities to implement an impactful, practical digital skills program very fast to high schools with functional PC labs.

CodeJKA Curriculum: Has been created in South Africa; Works offline; Is super fun and engaging – Think emojis; Full version Is FREE for government schools till 2022; All curriculum is digital (Desktop or Mobile), so there is no printing or royalties cost to roll it out; Teachers love it because learners can learn at their own pace; Is vocational focused, adding practical skills for entrepreneurial and employment; Is gender inclusive and purposeful – Girls love making websites that have a purpose. Through focusing narrowly on Front-end Web Development, the course quickly brings learners to a junior-level aptitude. Online mobile learning allows learners to continue to progress with the course or review, even when out of school, but it is not a requirement. The “Automated Grading of Offline Code Projects” feature allows teachers to quickly manage, assess and certify learners progress. CodeJKA.com is a social impact project driven by Code for Change

www.codeforchange.co.za

Codevision

We believe in education and teaching as one, where technology, people and their experience, act together to foster human development. Codevision delivers digital transformations solutions for Education Management in K12 schools and Educational Data for governments. We have over +500,000 daily users in 400 wonderful schools, spread in 4 continents. eSchooling is an Education Management System to empower the Digital Transformation in K12 schools. Working every day for over 13 years with school management, teachers, students and families we designed the best tools to manage education.

eSchooling gives the best answer you need to run your schools, from admission to graduation. All these features are available via browser or mobile device to all the people that makes education so important for every children's life: administrative (SIS), financial, academic, canteen, access control, cashless payments, asset management and a powerful dashboard and analytical tool. Use technology and data to make better decisions and stay in control of your education systems, while providing better experiences for all your community.

eSkola is Educational Data for Governments. We believe data is the Super-Power that will help countries across Africa to take advantage of their data to overcome education challenges and achieve the transformation in their societies toward the Sustainable Development Goals. eSkola is a pioneer on-line platform is the first to combines data from different sources such as schools, governmental agencies, NGO's and international organizations alongside data collect from field teams to deliver real time data and knowledge about the Educational Landscape in your region.

www.eschooling.eu

Digital Skills Foundation

Digital Skills Foundation, based in France, was established to enable everyone to become digital literate at an affordable cost. Our e-learning program, called the Digital Skills Passport, covers all aspects of digital technology – from basic instruction on how to operate a computer in a practical and safe way through to getting online and accessing social media. Our courses cover the everyday technologies that we use on a daily basis – computers, music, video, images, the internet and social media. If learners wish, they can progress from the Basic Start Modules right through to the Professional Digital Skills Passport Programme which teaches the practitioner level digital skills for the modern workplace – including Word Processing, Presentations, Spreadsheets, Networking, Databases, Productivity and Communications.

The Digital Skills Foundation is committed to ensuring that everybody has access to digital skills training. Our digital skills programmes have accessibility features for dyslexia, cognitive and visual impairment, colour blindness and for those with literacy issues. Our programmes are fun, supportive, confidence building and accessible. Digital Skills Passport is for everyone.

GradeMaker Pro

The exam authoring system that transforms the way you create assessments. Exam boards around the world are turning to technology to deliver assessments designed to meet the needs of today's students. GradeMaker Pro's exam authoring system provides: easy-to-use authoring tools that support the creation of professional-looking items and papers; a range of security features and tools providing maximum protection for your high-stakes content; item banking tools to create exams that meet international standards of validity and reliability. If building capacity, driving up quality and delivering world-class assessments are your organisational goals, talk to us about how GradeMakerPro can support you.

GradeMaker Analytics – Harnessing data for targeted, effective school improvement. Are you making the most of your national education and school data? We work with education ministries to provide a tailor-made analytics service, analysing performance trends and patterns at a macro and micro level. You decide what to measure, track and compare, and we create the data portal and reports. GradeMaker Analytics will unlock the power of your education data, allowing governments to monitor the impact of policy, inspectors to identify high performing schools as well as those needing support, and school leaders to become truly effective enablers of the best education for all.

www.grademaker.com

Intel

Since its founding in 1968, Intel Corporation has grown into the world's largest semiconductor company (based on revenue). The company employs nearly 100,000 people across more than 50 countries. Intel's products and technologies are at the heart of computing solutions that have become essential parts of businesses, homes and schools around the world; and are being used to tackle some of the world's most complex problems – in areas that include education, healthcare, economic development, and environmental sustainability. The company's products include microprocessors, chipsets and other semiconductor products that are integral to computers, servers, note – and netbooks, as well as consumer electronics, handheld devices and connected "embedded" products becoming part of cars, shopping kiosks and bank ATMs.

Intel's focus is not solely on the products it delivers. From primary schools to leading universities, Intel is committed to improving the quality of education around the world. Over the past decade alone Intel has invested over USD 1 billion and Intel employees have donated over 2.5 million hours in the last 10 years toward improving education in more than 50 countries. Intel's model for education transformation combines advocacy for policy reform, curriculum standards and assessment, sustained professional development, information and communications technology, and support of research and evaluation. We collaborate with governments, policy makers, and local vendors to make this model viable worldwide. Intel is headquartered in Santa Clara, California (USA).

Established in 2012, Knowledge E's name was fast to become synonymous with collaboration, professionalism and innovation. Head-quartered in Dubai, United Arab Emirates, and supported by a team of highly engaged professionals, Knowledge E works closely with over 100 clients world-wide from various types of organisations and government entities within the research and education sector to support their continued innovation and development. This is achieved by providing leading expertise, information resources and software solutions. Since its inception, Knowledge E has prudently expanded its expertise, services and technology in line with its vision of developing 'a more knowledgeable world'.

Knowledge E's three core offerings are the 3D's; 'Discover', 'Develop' and 'Disseminate'. 'Discover' through the KnE Digital Library Solutions for research literature discovery, as well as tailored content packages; 'Develop' through the KnE Learning Programmes, supporting capacity building and skills development within academia as well as the KnE Consulting Projects, serving universities on their mission to become 'world-class universities'; and 'Disseminate' through the KnE Publishing Services and the platform for Open Access publishing of journals and conference proceedings. Knowledge E also recently launched Zesty, an online platform aiming to provide individuals with the easiest possible access to relevant and trusted academic literature, and make access to paid content affordable. Zesty originates from the notion of building a more knowledgeable world, as there has never been a time where easy, affordable access to content has been more needed. Discoverable, reliable, and trustworthy sources are crucial to learning and ultimately, a better quality of life.

www.knowledgee.com

Since 2012 Kortext has established itself as the leading partner for universities and national educational organisations in providing unique personal digital learning content and solutions at a time when content is transitioning from printed textbooks to digital multimedia. The Kortext platform enables students to engage deeply with the multimedia learning content and simultaneously connect with their peers and their teachers to improve their results. Comprehensive analytics provides insights into content usage and utilisation along with student engagement and study patterns, leading to better outcomes.

The Kortext platform aggregates access to all the learning content from over 1,400 of the top global education publishers including Pearson, McGraw Hill Cengage, and Wiley. Today over 100 universities in the UK, and many more overseas, use Kortext to deliver digital learning content directly to students. On the national level projects like the Egyptian Knowledge Bank (EKB) is using Kortext to provide access to digital learning materials to students across an entire country. Kortext partners with key organisations across the learning spectrum to deliver the best learning experience including Microsoft, HP, Samsung, The British Library, OCLC, and EBSCO along with the learning management system providers such as Blackboard, Moodle, Instructure (Canvas) and D2L.

www.kortext.com

LinkedIn Learning is an online learning platform that combines Lynda.com's unmatched library of more than 14,000+ courses taught by real-world experts, with LinkedIn data and insights drawn from 610M+ member profiles and billions of interactions. These insights give you a unique and real-time view of how jobs, industries, organizations, and skills are evolving, while helping you identify the skills that your organization needs to succeed. These insights also fuel course recommendations that connect learners to the most relevant, applicable learning that is easy to engage with on any device.

MicroMaker is a joint venture based in Singapore and the UK. This start up specialised in creating STEAM educational resources many of which have been designed around the micro:bit. One of the founders of MicroMaker, David Crellin, worked with the BBC and other companies such as Microsoft and ARM holdings to develop the micro:bit which is a very low cost codable computer. Aimed specifically to encourage all young people and in particular girls to get interested in digital making, coding and electronic design one million micro:bits were given to students aged 11 in the UK in 2016.

In 2017 MicroMaker won a contract in Singapore to distribute 100,000 micro:bits to schools, colleges and community centres around Singapore. This contract forms the basis of the digital maker programme in Singapore which includes a training programme for teachers. Each teacher has the opportunity to learn how to use the micro:bit in the classroom followed by support them in getting into more creative and enterprising activities with their students. The digital maker programme runs up until March 2019.

In addition to the Digital Maker programme, MicroMaker specialises in developing kits for use with the micro:bit. Kits include Destination packs which have guided design outcomes to the Exploration packs for more open-ended creative activities and Investigation packs for exploring science and engineering.

MicroMaker

Mirai is the Middle East and Africa's first Learning Innovations Group. Mirai provides learning and leadership solutions for school networks, governments, and businesses. The Mirai Team has driven school improvement and innovation in this region and around the world, in four curricula, and at public and fee-paying schools. We know education; we know schools; we know technology; most importantly, we understand the needs of school leaders, teachers, and students. Each of our consultants has an advanced degree in their field and extensive experience. This marriage of theory and practice is critical to our strategic approach. Combined, our consultants have over 70 years of hands-on problem – solving expertise behind them. That's a lot of problems, and even more solutions. A core area of focus for the Mirai team is developing literacy through technology. Mirai provides digital resources and teacher development to efficiently improve reading around the world. We are delighted to present our unique reading solutions including Lexplore, an artificial intelligence-based reading assessment and intervention platform at Innovation Africa.

Lexplore was developed by researchers from Sweden's Karolinska Institute and used 30 years of research, advanced eye tracking, and machine learning to provide a two-minute accurate assessment of a child's reading. Lexplore has been endorsed by the British Dyslexia Association.

Novabase

Novabase is a global IT company, covering more than 40 countries, 2400 consultants, empowering the education sector in its digital transformation through digital tools: Education Management Solutions – Good management and decision-making are key to enable the Education's purpose when you have many, different schools to manage. It is not easy to have consistent and real time data about students, teachers, staff and overall performance to support decisions over all Education domains. We focus on the design and development of comprehensive and adaptive systems, that are scalable and open to further development to support the management of networks of schools.

Higher Education Intelligent Solutions – Universities struggle with an increasing diversity of processes and data across teaching and research activities and services, supplied by their multiple schools and business areas. Cumbersome administrative processes alongside outdated or disconnected data can be strong inhibitors of efficiency, quality of service and revenue. We aim to improve the excellence of Higher Education institutions by increasing their ability to simplify their daily processes and back-office operations, providing valuable analytics insights, available in a fast, secure, reliable, and efficient way.

Learning eXperience – Fast changing environments are everywhere and organizations are exposed to a high volume of regular changes that impact their businesses. New products, new services and business models are adapted and created every day, hence very hard to follow by a large group of employees on their daily endeavors. That's why we provide learning experiences using new technologies, to empower workers and students and enhance their performance.

ScienceScope

ScienceScope Ltd recently relocated to Downside School just south of Bath. As ScienceScope specialises in developing technology for education, this unique arrangement of a high tech company being based in a school offers significant opportunities for us and students to work together on a range of new and exciting projects.

ScienceScope combines leading edge research projects with supply of equipment to schools and universities. Our product development programme is inspired by the research we do. In recent years the key areas of research have been: Developing the only electronic device for measuring Arsenic levels in groundwater; Developing novel air quality monitoring technology which has been widely deployed in Singapore Bangkok and London; We have carried out a series of IOT based development projects both in the UK and Singapore schools. In the UK we won an £800K research grant from Innovate UK to work with 8 schools and three Universities to originate IOT@School. IOT@School which is being further developed in Singapore with the National Institute of Education.

We are an EXPO2020 Live award winner. This project has enabled us to develop the IOT@School concept further. We are working with the GEMS schools in Dubai and students are designing their own big data investigations. Examples include investigating microclimates around the school grounds, weather across the world and air quality in the classroom. We are working closely with the Dyson Foundation to inspire students to become the engineers of the future.

Smith & Ouzman

Smith & Ouzman is a global company specialising in printing and software for secure and sensitive documents, providing the highest standards in quality, reliability and integrity for over 65 years. Any document that holds a financial or intrinsic value is open to attempted forgery and counterfeiting. Whether the document holds a face value, or entitles the bearer to certain privileges, it will be viewed as a document of value and it is our intention to work with Educational and Government Institutions to help combat these attempts thereby protecting the integrity of the documents and the institution itself.

Over the past 20 years, the landscape of the security print industry has changed beyond recognition. Traditional security print markets are increasingly integrated with software and ICT services. Smith & Ouzman have responded to this change. We have developed a range of bespoke software solutions to support you and the protection of secure and sensitive documents, thus helping our partners with digital transformation projects for secure and sensitive documents.

The mission of the Ministry of Education is to realize the overall goals of the nation, such as offering accessible, affordable arts education and services of quality; developing a culture of innovation; encouraging all forms of artistic expression. In partnership with stakeholders, it is committed to providing all Namibian residents with equitable access to quality education programmes to develop the abilities of individuals to acquire the knowledge, understanding, skills, values and attitudes required throughout their lifetimes. The Education Customer Service Charter outlines the standard of service and is based on the Public Service Charter. The MoE will continue to inform about legislation, regulations, and current policy issues pertaining to its activities and programs. MoE Strategic Plans and Annual Reports – Strategic and annual plans and reports provide snapshots of the continuous improvement and development in the Ministry. Important Ministry Goals, Objectives, Performance Targets and Strategies are also outlined.

Niger Ministry of Professional and Technical Education

In accordance with the French-speaking professional training and technical training that took place in Bamako in May 1998, Niger embarked on a process of reorganizing vocational and technical education and training (VET). With this in mind, a workshop on EFPT sectoral policy was organized in 2004 to decide on the creation of a ministerial department in charge of TVET. Thus, the Ministry of Vocational and Technical Training in charge of Youth Employment (MFPT / E) was created in 2005 under the 5th Republic.

Niger Ministry of Secondary Education

Since April 11, 2018, Hon. Mohamed Sanoussi Samro has been Minister of Secondary Education (MES) created in August 2013. This sub-sector comes after the primary education of which it must consolidate and deepen the achievements, before the higher education which begins after the Baccalaureate. It covers two (2) cycles: The basic cycle splits up into two parts and has a duration of four years. It consists of the General Schools of Education (CEG) traditional and French Arab, students from primary education, aged 11 to 13 years. This cycle is sanctioned by the Brevet d'Etudes de the First Cycle (BEPC). The average cycle that welcomes students from colleges, aged 16 to 19, holding BEPC. After a period of three (3) years, it is sanctioned by the Baccalaureate which gives access to various higher studies. So, in a nutshell our mission is to ensure the consolidation of the Basic education achievements and to provide students with scientific, literary and artistic education in preparation for higher education or active life.

Nigeria – Kano State

Kano State was created on May 27, 1967 from part of the Northern Region. It is known as the 'Centre of Commerce' thanks to its daily trade volumes of over N20 Billion. It is the largest industrial centre in Northern Nigeria with major industries including textile, tanning, footwear, cosmetics, plastics, enamelware, pharmaceuticals, ceramics, furniture and other industries. Kano State's mission is to build a learning city, enhancing literacy and youth empowerment for a better and sustainable future. The State envisages providing high-quality and functional education for lifelong learning and self-reliance. The State aims to attain higher literacy rates and qualitative education levels with a proper integration of science and technology into the education curricula via formal and non-formal education.

Nigeria – Kwara State

Kwara State is known as 'The State of Harmony' on account of the peaceful relations that exist among its multicultural and diverse population of about 2.5 million people. With the state's excellent natural resources, good infrastructure and the positive support and encouragement of the state government, the outlook for industrial and commercial investors is very good. The State has a very good education system, with several universities, a teaching hospital, and research institutions maintaining the state's high reputation in this field. Being aware that, for any state to be competitive in the industry, it needs good educational infrastructure, Kwara State constantly seeks to improve the educational system. Therefore, Education represents one of the main sectors for which the State hopes to attract investment.

Nigeria – Lagos State

Lagos, known as 'Centre of Excellence', is a state in the western part of Nigeria and is currently estimated to be the second fastest growing city in Africa (7th fastest in the world). Lagos State sees at education as "the only veritable tool of socio-economic development, and the only legacy worth bequeathing to our children". The Ministry of Education aims to positively influence and reshape the present educational system in the state with a view to improving capacity and performance outcomes by redirecting and optimizing resources, designing effective policies, setting time lines in order to maximize educational excellence and progressively move towards the attainment of the desired quality education standards.

Nigeria – Ondo State

Ondo State is a state in Nigeria created on 3 February 1976 from the former Western State. It originally included what is now Ekiti State, which was split off in 1996. Akure is the state capital. The State recognises that education is "the bedrock of all meaningful and sustainable development". The provision of quality education for all citizens is therefore a matter of great concern to the Government of Ondo State. The mission of the Ondo State Ministry of Education, Science and Technology is to see to the total eradication of illiteracy in the State through formal and non-formal education.

Nigeria – Plateau State

Plateau State is known as "The Home of Peace and Tourism". The State is the twelfth largest state of Nigeria and is roughly located in the centre of the country. It is geographically unique in Nigeria because its boundaries totally surround the Jos Plateau, having the Jos Plateau totally in its central and northern part. Its capital is Jos. The vision is to serve as a catalyst for the development of a quality feeder system, for the sustenance of other relevant levels of education in plateau state. With a mission to deliver an uninterrupted, qualitative and accessible universal basic education to the plateau child, in order to prepare him/her for the purpose of adding value to the society.

Nigeria Federal Ministry of Education

The vision is to become an economic model, delivering sound education for public good. Nigeria's Federal Ministry of Education's mission is to use education for fostering development of all Nigerian Citizens to their full potentials in the promotion of a strong, democratic, egalitarian, prosperous, indivisible and indissoluble sovereign nation under God. The mandate of the Ministry is to formulate and co-ordinate a national policy on education; Collect and collate data for purposes of education Planning and Financing; Prescribe and maintain uniform standard of education throughout the Country; Control and monitor the quality of education in the Country; Harmonize educational policies and procedures of all the States of the Federation through the instrumentality of the National Council on Education (NCE); Effect co-operation in educational matters on an international scale; and Develop curricula and syllabuses at the National Level.

Republic of the Congo Ministry of Posts, Telecommunications and Digital Economy

The Congolese Government, through the Ministry of Posts, Telecommunications and the Digital Economy, has developed a national strategy for the development of the digital economy in line with international recommendations and with the objective of making digital technology a major lever for business competitiveness, Congo's attractiveness in terms of direct investment and economic diversification. It is the implementation of the Head of State's society programme "The march towards development", particularly in the ICT sector, whose vision is "to link Congo to the development of digital technology". This strategy, based on an integrated vision of long-term development, is based on three pillars:

- the e-citizen: services to the general public
- e-government: services to government and public administrations
- e-business: services and content for companies

Republic of the Congo Ministry of Technical and Vocational Education, Qualification and Employment

The mission of the Ministry is to ensure quality education and training for all, offering to everyone the best learning conditions, regardless of their social origin. The Ministry highlights the necessity and the urgency to develop the human capital, set of skills, talents, qualifications, experiences accumulated by an individual and which determine in part their ability to work or produce for oneself or for others. For a good orientation of the learners, the Minister Antoine Thomas Nicéphore Fylla Saint-Eudes suggested to reconcile the desires of employment, the needs of the national economy and the demands of the local companies. He also advised that apprenticeship and work-study programs be integrated into the university education system.

Republic of the Congo Ministry of Scientific Research and Technological Innovation

The Ministry is responsible for advancing scientific research within the Republic of Congo and has been driving the task of evaluating science, technology & innovation indicators (STIIs). Such indicators are now being used to implement improved policies for STEM and inform the panning of the ministry to enhance the Republic of Congo's scientific & technological development. The Ministry is determined to advance entrepreneurship and innovation through developing public-private partnerships with international industry operators.

Rwanda Ministry of Education, Science & Technology

The vision of the Ministry of Education (MINEDUC) is to provide the citizens of Rwanda with equal opportunities to high quality education through world class learning facilities and renowned learning institutions. The general mission of the Ministry of Education shall be to transform the Rwandan citizen into skilled human capital for socio-economic development of the country by ensuring equitable access to quality education focusing on combating illiteracy, promotion of science and technology, critical thinking and positive values.

Innovation Africa 2019 welcomes the following Universities & Organisations

Accra Technical University – Ghana

Established in 1949 as a Technical School and commissioned in 1957 as Accra Technical Institute, Accra Technical University then (Accra Technical Institute) became the first Technical University to be established. Since its establishment, it has and continues to offer education in hands-on and competency-based training in diverse fields of engineering and industrial practice. The University is endowed with skilled experts as lecturers and instructors, competent to impart invaluable knowledge and lessons on students. Currently, the University has 5 faculties – Faculty of Engineering, Faculty of Built Environment, Faculty of Applied Sciences, Faculty of Applied Arts, and Faculty of Business – and 16 departments. The vision of Accra Technical University is to be a Technical University of global excellence in competency based and practice-oriented training, applied research and technology transfer. The University aims to continuously produce graduates that are fully equipped for the world of work and the provision of technological solutions through applied research to industry and communities.

Angola's Sovereign Fund

The Angola Sovereign Fund is a sovereign investment fund managed by an autonomous Executive Committee. The Fund's organisational structure ensures that adequate review mechanisms are in place through the adoption of good practice at global level, such as the appointment of independent auditors. The approach of the Angola Sovereign Fund ensures compliance with the laws and regulations that apply to the Fund. The Angola Sovereign Fund is governed by the Santiago Principles, which are a voluntary set of practices and values developed by the International Working Group (IWG) of Sovereign Wealth Funds (SWFs) in October 2008. The Fund also actively seeks to achieve a high ranking on the Linaburg-Maduell Index, which categorizes Sovereign Wealth Funds as regards their overall transparency.

Association for the Development of Education in Africa

The Association for the Development of Education in Africa (ADEA) is first and foremost a forum for policy dialogue. Established in 1988 as a framework for better coordination among development agencies, it has evolved into a pan-African institution built on a genuine partnership between African ministries of education and training and their technical and external partners. ADEA is also a network of policy-makers, educators and researchers, and, based on its capacity to foster policy dialogue and pool ideas, experience, lessons learned and knowledge, it acts as a catalyst for educational reform. It is recognized today as being a major actor in the processes of dialogue, sharing and learning for qualitative change in education aimed at promoting Africa's development. One principle underlying ADEA's philosophy is that the responsibility for education rests with the governments of Africa. This is why ADEA is concerned with fostering a process that empowers African ministries of education and makes development agencies more responsive to the concept of national ownership.

Botho University – Botswana

Botho University is Botswana's largest private tertiary education provider, founded in 1997. The institution has grown over time from a single discipline college to a multi-disciplinary university offering quality undergraduate programmes and some graduate studies through five faculties of Business and Accounting, Computing, Hospitality and Sustainable Tourism, Engineering and Applied Sciences, and Health and Education. Programme development draws significantly from industry input to ensure relevance. Some professional programmes are also offered in Accounting. BU also offers a range of short-term corporate training programmes to public and private sector organisations. Botho University has campuses in Botswana, Lesotho, Namibia and Eswatini where it is duly registered and accredited by the relevant higher education regulatory authorities. In addition to the physical campuses, a number of programmes are also available through the Blended and Distance Learning campus. Botho University aspires to be an integral player in building an economically diversified, fast growing, and prosperous Africa built on integrity, excellence, inclusiveness and financial viability; with a mission to produce well-rounded, entrepreneurial, and globally-employable graduates with the knowledge, skills and competencies to create value and drive productivity increases needed to catalyse sustainable economic growth.

British Council

The British Council is the UK's international organisation for cultural relations and educational opportunities. It creates friendly knowledge and understanding between the people of the UK and other countries, by making a positive contribution to the UK and the countries it works with – changing lives by creating opportunities, building connections and engendering trust. The council works with more than 100 countries across the world in the fields of arts and culture, the English language, education and civil society. Last year, it reached more than 80 million people directly and 791 million people overall, including online, through broadcasts and publications.

Cameroon: ICT University

The ICT University operates a purely US-based curriculum to provide quality ICT and Managerial Human Capacity Development specially targeted for Africa, Latin America, the Caribbean and Asia, the ICT University is a vibrant institution which aims at imposing itself as premier destination for research, innovation and training of scholars relevant for the context of developing economies. Founded in 2010, The ICT University (The American curriculum-based university serving developing nations), has multiple campuses of The ICT University Foundation, USA. All ICT University Foundation campuses are based in developing countries. With a plethora of programs at the undergraduate, graduate and doctoral levels, including diploma and certification programs, the ICT University offers a dynamic and flexible learning environment that inspires innovation and creativity and places emphasis on student access. The ICT University prides itself on offering an intimate, cutting edge campus environment disposing of all resources essential for producing tomorrow's leading ICT experts, technopreneurs, renewable energy engineers, and business managers. The university has also created collaborations, partnerships and exchange agreements with leading US, African and other international institutions that further enrich the academic, social and cultural diversity of our campus. "Our students have quite a unique experience with the set of clubs and social activities for recreational purposes and community engagement work, seminars and a whole lot of other activities vital in ICT-U core values assimilation". The ICT University operates within a Board of Trustees governance system.

Cape Coast Technical University – Ghana

Cape Coast Technical University (CCTU) was established in 1962 out of a dire need for highly qualified and skilled manpower in education. The University has three 3 Faculties, thirteen Departments, Directorates, Sections and Units which contribute in the teaching and learning processes in the University. The University now offers Bachelor of Technology programmes (Top-Ups), HND, Professional Diploma and other Diploma Programmes. Cape Coast Technical University (CCTU) is mandated to provide higher education in Engineering, Science and Technology based disciplines, Technical and vocational Education and Training, Applied arts and related disciplines. The aim is to train its students to be academically and technically balanced in order to match the challenges of the new century. Cape Coast University's vision is to become a leading global tertiary institution that offers high quality career-oriented programmes in Engineering, Applied Sciences, Applied Arts, Technical and Vocational Education, Applied Research and Consultancy for national development. The University is committed to imparting technical vocational skills to our students and participants in the pursuit of national development, in the areas of Engineering, Applied Sciences and Applied Arts, Technical and Vocational Education through knowledge transfer and partnership with industry and commerce.

Central University of Technology, Free State – South Africa

In previous years CUT have focused on the Academic Project, in order to improve the relevance and impact and enhance the quality of learning, teaching, research and innovation practices. The 2016 theme was "The Year of Innovation and Entrepreneurship" and in 2017 the theme was "The Year of the Human Project", focusing on staff, students and other stakeholders, and enhancing the human reconciliation drive. Going forward, the following special project for the next five years was approved in September 2017: "Reimagining CUT as a transformative University and 'model' UoT in Africa, impacting on the socio-economic development of the Central region of South Africa and beyond".

Ho Technical University – Ghana

The Ho Technical University was established in 1968 as a Technical Institute with the primary objective of providing pre-technical education. By 1972, the institute had made tremendous progress in upgrading of the courses offered. Consequently, the pre-technical programmes gave way to courses in the Engineering and Vocational fields, such as Basic Engineering, Agricultural and Mechanical Engineering, Building Technology and Business Education. In 1986, the Institute became a Polytechnic. It however continued to operate as second cycle institution, until 1993 when the Polytechnic was upgraded to a fully-fledged tertiary institution and charged with the responsibility of training students in the technical and vocational skills to the Higher National Diploma [HND] level. Subsequently, in 2007, Polytechnics were given the mandate to award their own degrees to the highest level. Since then, the Polytechnic has been running programmes from non-tertiary level to the bachelor's degree level. The vision of Ho Technical University is to become a reputable technological institution contributing actively to national development. Its mission is to train highly competent human resource to highest level possible through career-focused education, skill training and research in partnership with stakeholders.

Koforidua Technical University – Ghana

Koforidua Technical University was established in 1997 with the aim of producing high-level, career-focused and skilled manpower to support the country's industrial growth, has since 1999 turned out graduates with Higher National Diploma (HND) in Accountancy, Marketing, Purchasing and Supply Statistics and Computer Science. The University currently has five faculties and one Institute namely, the Faculty of Business and Management Studies, Faculty of Applied Science, Faculty of Health and Allied Sciences and Technology, Faculty of Built and Natural Environment, Faculty of Engineering and the Institute of Open and Distance Learning (IODL). The University has significantly increased its academic programme offerings a total of twenty Higher National Diploma (HND) programmes and Thirteen Bachelor of Technology (B-Tech) programmes. The University's vision is to be providers of standard science and technology education, a centre of excellence in applied research and a reference point for solution to community problems. Its mission is to provide tertiary level technical education through the development of career-focused skills in collaboration with industry.

Kumasi Technical University – Ghana

Kumasi Technical University was established in 1954 as Kumasi Technical Institute (K. T. I.) to offer craft courses. In 1963, the Institute was converted to a non-tertiary Polytechnic status under the Ghana Education Service to start offering, in addition, technician diploma and sub – professional courses. In 1992, the Polytechnic was elevated to a tertiary institution to provide high calibre skilled manpower with reference to manufacturing, commerce, science and technology to act as a catalyst for technological development. Finally, in 2016, it was converted to the present Kumasi Technical University with the aim of providing higher education in engineering, applied arts, science technology-based disciplines, technical and vocational training. The University's vision is to be a centre of excellence for technological and entrepreneurial development. Its mission is to create a favourable environment for teaching, research, skills development and entrepreneurship training in Engineering, Science, Technology, Applied Social Sciences for industrial and societal development in Ghana, Africa and beyond.

Kwame Nkrumah University of Science & Technology

The mandate of Kwame Nkrumah University of Science & Technology (KNUST) is to provide higher education, undertake research, disseminate knowledge and foster relationships with the outside persons and bodies. The strategic mandate of the University is derived from Science and Technology in its name. The University aims to build on KNUST's leadership as the premier science and technology university in Ghana and to be among the top ten Universities in Africa. The mission of KNUST is to advance knowledge in science and technology through creating an environment for undertaking relevant research, quality teaching, entrepreneurship training and community engagement to improve the quality of life.

Nigeria Progressive Governors Forum

Progressive Governors Forum is a forum comprising all state governors of the All Progressives Congress (APC), the mega party which was born of a merger between the Action Congress of Nigeria (ACN), the All Nigeria Peoples Party (ANPP), the Congress for Progressive Change (CPC), and members from the All Peoples Grand Alliance (APGA), among others. The main goal of the Forum is to implement policies which would develop human capital in their respective states and improve the quality of life through job creation, which would, in turn, eradicate poverty. The objectives of the Forum include: Partnering with other progressive governors in Nigeria, irrespective of whether or not they are members of the APC, in order to promote good governance and deepen the democratic process in the country; Setting a uniform agenda especially with respect to healthcare and education across all APC states, with the aim of establishing and replicating results across board; To support the party, the APC, in engaging other stakeholders with the aim of strengthening democracy and accountability in government.

Sunyani Technical University – Ghana

Sunyani Technical University (STU) was established in 1967 as a Technical Institute. It was subsequently upgraded to a Polytechnic in 1997 and converted to the present Sunyani Technical University in 2016. STU is committed to the provision of career-focused education in engineering, science and technology, technical and vocational, applied arts and related disciplines with hands-on experience and entrepreneurial development to meet the higher and middle level manpower needs of the country. Currently, Sunyani University offers the Bachelor of Technology Degree Programme, Higher National Diploma (HND) and Non-Tertiary Programme in technical and vocational courses. The main objectives of the University are to: Provide tertiary education in the fields of manufacturing, commerce, science technology, applied social science, applied arts and any other field approved by the Minister; and provide opportunities for skills development, applied research and publication of research findings. The University's vision is to become a top-notch Technical University for the provision of career-focused, practically – oriented and entrepreneurially inclined higher and middle level manpower training for the socio-economic development of the Brong Ahafo region and Ghana to contribute to the global sustainable development.

Takoradi Technical University – Ghana

The Takoradi Technical University was established in September 2016, as a result of the government's policy to convert Takoradi Polytechnic, among five other Polytechnics, to the status of Technical University. The University's vision is to be the most preferred engineering and applied sciences university of choice devoted to excellence in teaching and applied industrial research to produce competent world-class human resource for the strategic development of industry in order to achieve an enhanced national and global development. The university aims to provide advanced instructional delivery in engineering and applied sciences and also creative arts, business and technology-based research disciplines in strong collaboration with industry through competency-based teaching approaches, which contribute to the advancement of the Western Region and Ghana as a whole.

UK Department for International Development

Department for International Development

The Department for International Development (DFID) leads the UK's work to end extreme poverty. The Department is tackling the global challenges of the current time including poverty and disease, mass migration, insecurity and conflict. Its work is building a safer, healthier, more prosperous world for people in developing countries and in the UK too. The DFID is responsible for: honouring the UK's international commitments and taking action to achieve the United Nations' Global Goals; making British aid more effective by improving transparency, openness and value for money; targeting British international development policy on economic growth and wealth creation; improving the coherence and performance of British international development policy in fragile and conflict-affected countries; improving the lives of girls and women through better education and a greater choice on family planning; preventing violence against girls and women in the developing world; helping to prevent climate change and encouraging adaptation and low-carbon growth in developing countries.

UK Department for International Trade

Endorsing Partner

Department for International Trade (DIT) promotes British trade across the world. Its work secures and improves the economic well-being and stability of the UK and helps create tens of thousands of jobs every year. The DIT is responsible for: bringing together policy, promotion and financial expertise to break down barriers to trade and investment, and help businesses succeed; delivering a new trade policy framework for the UK as we leave the EU; promoting British trade and investment across the world; building the global appetite for British goods and services.

University of Cape Coast – Ghana

The University of Cape Coast is an equal opportunity University uniquely placed to provide quality education through the provision of comprehensive, liberal and professional programmes that challenge learners to be creative, innovative and responsible citizens. It was established in 1962 as a University College. In 1971, the College attained the status of a full and independent University, with the authority to confer its own degrees, diplomas and certificates. The University's original mandate was therefore to train graduate professional teachers for Ghana's second cycle institutions and the Ministry of Education in order to meet the manpower needs of the country's accelerated education programme at the time. Today, with the expansion of some of its Faculties/Schools and the diversification of programmes, the University has the capacity to meet the manpower needs of other ministries and industries in the country, besides that of the Ministry of Education. The vision of the University of Cape Coast is to be a University with a worldwide acclaim that is strongly positioned for innovative teaching, research, outreach and professional development.

University of Ghana

The University of Ghana, the premier university and the largest university in Ghana was founded as the University College of the Gold Coast in 1948 with the aim of providing and promoting university education, learning and research. The University is run on a collegiate system and comprises the following colleges: College of Basic and Applied Sciences College of Education College of Health Sciences College of Humanities. In addition, the University has several research institutions and centres for learning and research, including Noguchi Memorial Institute for Medical Research (NMIMR), Centre for Tropical, Clinical Pharmacology and Therapeutics, Regional Institute for Population Studies, Institute for Environmental and Sanitation Studies and the Institute for Statistical, Social and Economic Research. As the leading university in Ghana, the University aims to produce the next generation of thought leaders to drive national development. Through its research institutes and other centres of learning and research, faculty members are involved in studies that support policy making for national development, often in collaboration with other international institutions. The University's vision is to become a world class research-intensive University over the next decade. Its mission is to create an enabling environment that makes University of Ghana increasingly relevant to national and global development through cutting-edge research as well as high quality teaching and learning.

University of Jos – Nigeria

The University of Jos has a vision of being a globally rated University providing an excellent educational experience with high impact on society. Its mission is to serve the people of Nigeria and humanity at large by: Encouraging and promoting a culture of excellence and building an innovative university; Delivering an outstanding and inclusive student academic experience as well as promoting good character. Established in 1975 with a focus of being an innovative institution, it has grown to establish 15 Faculties, partnered with organisations such as the Carnegie Corporation, HP, A.P. Leventis, International Centre for Theoretical Physics (ICTP), CISCO, JICA, National Institute of Health (NIH) and the World Bank sponsoring an Africa Centre for Excellence. Prominent scholars associated with the University are; Ali Mazrui, Helon Habila and Anthony Nyong, a 2007 Nobel Prize winner. Today, the University is committed to promoting partnerships that are relevant and impactful.

University of Nigeria Nsukka

The University of Nigeria Nsukka is a federal university founded in 1955 and formally opened in 1960. UNN operates 102 academic departments across 15 faculties and offers 82 undergraduate programmes and 211 postgraduate programmes for a student population over 36,000. It does so across four campuses: Nsukka; Enugu campus (UNEC); University of Nigeria Teaching Hospital (UNTH), in Ituku-Ozalla and the University of Nigeria Aba campus (UNAC). There is also a UNN Business School. The Nsukka campus houses the faculties of agriculture, arts, biological sciences, education, engineering, pharmaceutical sciences, physical sciences, social sciences, and veterinary medicine. Research activity is undertaken across institutes for African studies, education, developmental studies, postgraduate studies and herbal medicine and drugs research and development. There are also centres established to look at climate change, space science and energy research. The University's vision is to become, through research and innovation, a globally reputed first-rate School of Postgraduate studies. UNN aims to attract, educate, train and transform qualified persons to high level manpower that are thoroughly equipped with adequate and update knowledge and specialized skills in research and innovation and deployable for first-rate development and improvement in all fields of human endeavour.

University of Professional Studies – Ghana

The University of Professional Studies, Accra (UPSA) is a progressive public institution that provides both academic and professional higher education in Ghana. It was established in 1967, but since then it has undergone a lot of restructuring over the years through to where it is today. With over fifty years of experience, UPSA has achieved the reputation as the oldest Ghanaian human resource development institution in professional Accountancy and Management with many of its products in key leadership positions in Ghana and abroad. UPSA remains the only public institution in Ghana with the mandate to offer both academic degrees and provide tuition for business professional qualifications. Combination of scholarship with professionalism is the foundation of UPSA's unique profile. With this background, the University has built systems thereby laying the foundation for a distinctive academic and professional profile somewhat different from the requirements of a purely professional or academic institution. UPSA is fully accredited by the Accreditation Council for Business Schools and Programmes (ACBSP) in USA. UPSA strongly believes that Knowledge represents a basis for development, and it is relevant when shared and used. The University's vision is "to be a world class education provider in both academic and professional disciplines, nationally entrenched, regionally recognized and globally relevant". Its mission is to provide and promote quality higher education and training in management and other related disciplines by leveraging a structured mix of Scholarship with Professionalism in Ghana and beyond.

University of South Africa (UNISA) – South Africa

"As Africa's leading open distance learning institution, we offer international accredited qualifications and have world-class resources that inspire learners to create meaningful futures on their own terms. We are a reputable, comprehensive, flexible and accessible open distance learning institution that is motivating a future generation. Our vision is "towards the African University shaping futures in the service of humanity" drives us to find answers to Africa's educational and developmental problems."

Varkey Foundation – Ghana

The Varkey Foundation exists to improve education for underprivileged children throughout the world. The foundation's main focuses are improving global teacher capacity by training teachers and principals in developing countries; providing access to education via a variety of programmes and projects; and advocating for change in, and conducting research that can help develop, education policies worldwide. The foundation launched several programs to improve educational system in Ghana. Among these, the projects "Train for Tomorrow, Ghana" which aims to improve teaching practice through regular interactive, activity-based training sessions and the "Making Ghanaian Girls Great!" (MGCubed Project) which uses solar-powered and satellite-enabled distance learning infrastructure to deliver interactive learning sessions to students, teachers, communities and government officials.

World Bank

The World Bank is a vital source of financial and technical assistance to developing countries around the world. It is not a bank in the ordinary sense but a unique partnership to reduce poverty and support development. The World Bank Group comprises five institutions managed by their member countries. The World Bank Group's mission is to end extreme poverty by reducing the share of the global population that lives in extreme poverty to 3 percent by 2030; and to promote shared prosperity, by increasing the incomes of the poorest 40 percent of people in every country. The World Bank offers support to developing countries through policy advice, research and analysis, and technical assistance. It also provides services such as low-interest loans, zero to low-interest credits, and grants to developing countries. These support a wide array of investments in such areas as education, health, public administration, infrastructure, financial and private sector development, agriculture, and environmental and natural resource management. Some of our projects are co-financed with governments, other multilateral institutions, commercial banks, export credit agencies, and private sector investors.

Innovation Africa 2019 welcomes the following Media Partners

Amsterdam Group

Press & Media Agency

Founded in 2006, Amsterdam Group Public Relations Inc. was established to strike a delicate balance between contemporary world-wide-web branding and cutting-edge, next generation social media engagement with the established and highly accredited practice of media relations and traditional thought leadership promotion.

We secure bold positioning around the world, crafting an indelible imprint with prominent audiences for our clientele, which include and have included Georgian Prime Minister Bidzina Ivanishvili's "Georgian Dream" campaign, Zimbabwean Prime Minister Morgan Tsvangarai and that nation's Sport and Education Minister David Coltart, former Nigerian Governor and oil shipping magnate Dr. Orji Uzor Kalu, the Arcadia Foundation, MYUTIQ, First International Bank, Families USA, MyBucks Financial Technology, Contec Global Group, Capital Nine Zero (CNZ), leading global micro-finance charity Opportunity International, and a range of other corporations, government officials and agencies.

African Business

African Business is the bestselling pan-African monthly business magazine. Each month, the publication brings the very best business financial reports and features to our readers. African Business is respected for its editorial excellence and award-winning editor. Our readers include decision makers in the private sector, government officials and thought leaders across Africa, Europe and the USA. We have built a unique distribution network including newsstand sales, street vendors and an international subscription base, controlled circulation to business leaders and policy makers, as well as distribution onboard a large number of international airlines and lounges, hotels and major international and industry specific events. For nearly 50 years IC Publications has reported on Africa and built strong relationships with strategic partners like the World Economic Forum, Commonwealth Business Council, Corporate Council on Africa, World Bank, UN, AfDB, and our Media Partners include Bloomberg, CNN, CNBC, Africa N1 and BBC World.

African Business Central

African Business Central ("ABC") is a leading online media company showcasing curated and original news on African Business, primarily, and all things Africa, in general. ABC's rapidly-growing site attracts tens of thousands of visitors every month that read and watch news, analyses, and opinions of business, economic, political, and cultural events in and about Africa. ABC is making its mark around the world telling Africa's success stories and highlighting the continent's swift socio-economic ascent to a rapidly-growing global audience. ABC's core values are based on the notion that business, in general, and entrepreneurship, in particular, is the surest path to Africa's socio-economic progress.

Arcadia Foundation

The Arcadia Foundation is a non-profit organization established to promote democracy and combat corruption in governments worldwide. The Foundation strives to raise awareness on the importance of good governance and transparency as they are critical foundations needed to stimulate dialogue, freedom and encourage economic investment confidence on a global scale. We provide the training, the tools and the forum for discussion on values critical to our mission's continued success – civil liberties, the promotion of judicial independence and fair elections, the separation of powers, rule of law, and ultimately the redefining of fundamental human rights, reaching out to a global citizenry yearning to better understand their respective governments.
